

Memorandum

DATE : 04/23/2020

TO: Littleton Planning Board
CC: James Garreffii, RS, NABH
FROM: Goldsmith, Prest & Ringwall Inc. (GPR)
RE: HEALY CORNER; 195 TAHHAWAN ROAD, LITTLETON, MA

At the request of the Littleton Planning Board GPR has conducted additional soil testing on four lots of the Density Yield Plan known as Lots 6, 7, 8 & 9. The soil absorption system on these lots was previously sized based on nearby soil testing and the NRCS Soil Mapping. An official Soil Suitability Assessment for On-Site Sewage Disposal deep observation hole was recently dug and witnessed on each lot in question. The purpose of the testing was to confirm the soil mapping previously used to determine the lot's ability to site and the size of a soil absorption system for a four-bedroom dwelling on said lots.

Given the high groundwater when asked to perform the tests and the continued presence of high groundwater the size of the soil absorption system is based upon the Title 5 Policy for Alternative to Percolation testing guidance for system upgrades effective May 3, 2006. This policy assumes the slowest percolation rate for the most restrictive soil classification within the absorption area. The soils classification used was based upon an agreed visual observation by the Soil Evaluator from GPR and NABH and not a particle size analysis by a laboratory. The soils from the four lots were classified as Loamy Sands a Class I soil. This Classification is consistent with the system sizing used in the Density Yield Plan.

GPR has not reduced the size of the soil absorption system shown on the Density Yield Plan for a continued conservative approach. Please refer to the attached Soil Suitability Assessment sheets.

Determination for Seasonal High Water Table

Method Used:

Depth observed standing in observation hole _____ inches _____
 Depth weeping from side of observation hole _____ inches _____
 Depth to soil mottles * _____ inches See individual Reports _____
 Ground water adjustment _____ feet _____

Index Well Number _____ Reading Date _____ Index Well Level _____

Adjustment Factor _____ Adjusted Ground Water Level _____

Depth of Naturally Occuring Pervious Material

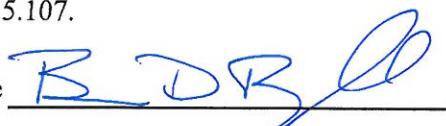

Does at least four feet of naturally occuring pervious material exist in all areas observed throughout the area proposed for the soil absorption system? Yes _____

If not, what is the depth of naturally occuring pervious material? _____ Feet

Certification

I certify that I am currently approved by the Department of Environmental Protection pursuant to 310 CMR 15.017 to conduct soil evaluations and that the above analysis has been performed by me consistent with the training, expertise and experience described in 310 CMR 15.017. I further certify that the results of my soil evaluation, as indicated, on the attached soil evaluation form, are accurate and in accordance with 310 CMR 15.100 through 15.107.
