### **Introduction and Methodology**

## Introduction and Methodology

This Stormwater Management Report is intended to accompany plans for the proposed residential development known as Hager Homestead at 336-338 King Street, Littleton, MA. Included in this report are calculations that support a final engineering design as required by the state's Wetlands Protection Act Regulations and the Town of Littleton's ordinances and regulations. Site specific information is presented under two scenarios, "pre-development" and "post-development" conditions, so that potential impacts due to the project can be identified, quantified and, as necessary, mitigated.

The final design intent seeks to meet the following interrelated goals:

1. Limit stormwater runoff rates and volume for the 2-, 10-, 25-, 50, and 100-year storm events to existing (pre-development) levels;
2. Evaluate potential on- and off-site flooding during the 100-year storm event due to proposed development;
3. Maintain or increase the volume of stormwater recharged per storm event to those of existing (pre-development) levels;
4. Prevent appreciable sediment and other suspended solids and contaminants transport by trapping them on site via Best Management Practices;
5. Provide adequate drainage for new surfaces;
6. Maintain existing drainage patterns while providing a cost-effective engineering solution that addresses regulatory as well as real-world constraints.

## Site Description

The proposed project is a senior residential development located off King Street in Littleton. The project area is comprised of two parcels with a total area of 15.16± Ac. designated as U19-38-0 and U19-38-1 by the Town of Littleton Assessor. The project site consists primarily woods and grass ground cover with wetlands covering the northwest portion of the size. There are three existing buildings on the project site shown on the Existing Conditions Plan. The three existing buildings are shown as #336, #338 and an existing storage building. The limit of disturbance will be limited within the southeast portion of the project site up to outside of the 50-ft wetland buffer limit. The project area / limit of disturbance is approximately 133,560 SF of the total project site, which will also be limit of drainage catchment for analysis purpose.

Available NCRS online soils mapping shows the soils within the project area to be Wareham loamy fine sand, 0 to 5 percent slopes in the northwest portion of the site, Hinckley loam sand, 15 to 25 percent slopes in the northern portion of the site, and Merrimac-Urban land complex, 0 to 8

percent slopes running along King Street. Generally, the Hydraulic Soil Group (HSG) on site is a type A soil group.

GPR has performed soil testing on 12/16/19 (See attached soil testing logs). Deep hole soil test pits shown that the soil within the project area is generally Fine Sand, which should be considered under HSG A for the purpose of drainage analysis. A Hydraulic Soil Group A was used for the design and analysis of the project site.

Under the pre-development scenario, as shown on the plan entitled "PRE-DEVELOPMENT WATERSHED MAP", included within the attached Appendix. The Subcatchment 1.1 (SC-1.1) describes the portion of the project site outside of the wetland area with runoff flowing northwest into the existing wetland on site, which will be the analysis point AP-1.

### Project Description

The purpose of this project is to create a senior residential development known as Hager Homestead. The proposed project will construct a total of 24 residential dwelling units and provide 42 parking spaces for the residents and guests. The proposed project will construct 3 two-family dwelling units, 3 townhouse dwelling units and 15 independent living units. The existing building shown as #336 on the east portion of the project area will be partially demolished, renovated and used as a base for the construction of a common area for the proposed 15 independent living units. The existing building shown as #338 located on the north portion of the project area will also be renovated and incorporated as part of the senior residential development as a two-family dwelling unit. The existing barn building will be renovated and moved northwest outside of the 50' wetland buffer limit. 3 new residential buildings will be constructed west of the existing #336 building that will provide 7 dwelling units.

The 42 parking spaces will be constructed to serve the proposed development, which will include 2 handicap accessible parking spaces. 14 of the 42 total parking spaces are under a car port as required by the Town of Littleton Zoning bylaw. The 42 parking spaces are spread out in 3 separate parking areas. 17 parking spaces will be located on the parking lot shown on the south portion of the project area with new curb cut access on King Street. A second proposed curb cut access on King Street will be located approximately 180 feet north of the south parking area. The north side curb cut access will provide access for the 21 spaces parking area located on the north east portion of the project area, and the 4 spaces parking area located adjacent to the main entrance.

To collect and treat stormwater runoff on site Impervious areas are being directed to proposed BMP's on site prior to discharging into the existing wetland. The proposed parking areas will each have a deep sump catch basin fitted with a Silt Prison set to pre-treat and discharge into the Infiltration Basin (IB) or Wet Water Quality Swale (WQS) for stormwater attenuation and further treatment prior to discharging into the wetland outside of the project area. In order to provide recharge to the groundwater, clean roof runoff will be collected and conveyed to subsurface Infiltration Chambers (IC) set under the southern parking area. The Infiltration Basin will also provide additional groundwater recharge as well as attenuate stormwater. The proposed BMP's have been designed in accordance with the Massachusetts Stormwater Standards to attenuate

peak flows, treat runoff from impervious surfaces and maintain groundwater recharge to those of pre-development conditions.

Under the post-development scenario, the project has been divided into a total of 17 subcatchment areas, shown on the plan entitled "POST-DEVELOPMENT WATERSHED MAP", and included in the attached Appendix, outlining runoff to the development's analysis point.

SC-1.1, SC-1.2, SC-1.6, SC-1.7, SC-1.8 and SC-2.2 outline stormwater runoff from the proposed roof, lawn area and some unconnected paved walkway being conveyed into the Infiltration Chambers. The Infiltration Chambers will have an overflow pipe flowing to DMH-1.

SC-2.1 outlines runoff from proposed lawn area and car port roof south of the project area flowing directly into the Wet Water Quality Swale.

SC-2.5 outlines runoff from the north side parking area to be collected by a deep sump Silt Prison catch basin to meet the 44% TSS removal and conveyed to the Sediment Forebay / Infiltration Basin prior to discharging into the wetland on site.

SC-2.7 outlines runoff from the east paved parking area and SC-2.6 outlines runoff from the south paved parking area. Both subcatchment areas are to be collected by deep sump Silt Prison catch basins to meet the 44% Total Suspended Solid (TSS) removal requirement and conveyed to the Wet Water Quality Swale (WQS) in order to meet the 80% TSS removal prior to discharging into the wetland on site.

SC-2.8 outlines runoff from the lawn area and wooded area flowing directly into the Sediment Forebay / Infiltration Basin.

SC-1.3, SC-1.4 and SC-1.5 outline stormwater runoff from the proposed clean roof through roof drains and into the Sediment Forebay / Infiltration Basin.

SC-2.3, SC-2.4 and SC-2.9 outline stormwater runoff from the proposed clean roof, lawn area and some unconnected paved walkway flowing through grass ground cover area before flowing into the wetland on site.

Infiltration Chambers and Infiltration Basin are set 2 feet above Estimate Seasonal High Ground Water Table (ESHGW) in order to infiltrate stormwater runoff to meet the requirement stormwater recharge volume of 1,117 CF. Infiltration Chambers, Infiltration Basin and Water Quality Swale will attenuate stormwater runoff onsite, in order to meet or reduce peak stormwater runoff for the 2-, 10-, 25-, 50-, and 100-year storm as required by the MassDEP Stormwater Regulations.

#### Hydrologic and Hydraulic Computation Methodology

Runoff rates were computed using the Soil Conservation Service TR-20 Method entitled "Urban Hydrology for Small Watersheds" within the HydroCAD Stormwater Modeling software platform.

The following 24-hour rainfall events from the Northeast Regional Climate Center (NRCC) Extreme Precipitation Tables database were analyzed:

Frequency (years): 2, 10, 25, 50 and 100

As outlined above, runoff from the site has been analyzed at one point under the pre-development and post-development conditions. As a standard for comparison AP-1 is represented in both the pre and the post development cases.

## **Summary of Results**

Peak discharge rates and volumes of the calculated runoff for both conditions analyzed are displayed in the HYDROLOGY SUMMARY that follows. As shown within the summary, the peak discharge rates and volume for the 2, 10, 25, 50, and 100-year storm events are less than or equal to the pre-development conditions.

The deep sump hooded catch basins fitted with Silt Prison provided Total Suspended Solids (TSS) removal of 63% to meet the pre-treatment requirement of 44%. Sediment Forebay, Infiltration Basin and Water Quality Swale provided additional TSS removal to meet the required 80% TSS Removal per MassDEP Stormwater management standard. The Infiltration Basin and Infiltration Chambers retain and infiltrate 4,111 cubic feet of runoff prior to discharging, well in excess of the minimum required 1,117 cubic feet occurring under existing conditions and displaced by the proposed development.

The proposed development meets the MassDEP Stormwater Management Standards through the use of Best Management Practices that address groundwater recharge, water quality (first flush) retention, and suspended solids removal within sustainable BMP's. See Appendix for computed solids quantities / removal process trains, and water quality runoff volumes.

## **Section 3**

### **Mass DEP Stormwater Management Report Checklist**

# Checklist for Stormwater Report

## A. Introduction

**Important:** When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.

A Stormwater Report must be submitted with the Notice of Intent permit application to document compliance with the Stormwater Management Standards. The following checklist is NOT a substitute for the Stormwater Report (which should provide more substantive and detailed information) but is offered here as a tool to help the applicant organize their Stormwater Management documentation for their Report and for the reviewer to assess this information in a consistent format. As noted in the Checklist, the Stormwater Report must contain the engineering computations and supporting information set forth in Volume 3 of the [Massachusetts Stormwater Handbook](#). The Stormwater Report must be prepared and certified by a Registered Professional Engineer (RPE) licensed in the Commonwealth.

The Stormwater Report must include:

- The Stormwater Checklist completed and stamped by a Registered Professional Engineer (see page 2) that certifies that the Stormwater Report contains all required submittals.<sup>1</sup> This Checklist is to be used as the cover for the completed Stormwater Report.
- Applicant/Project Name
- Project Address
- Name of Firm and Registered Professional Engineer that prepared the Report
- Long-Term Pollution Prevention Plan required by Standards 4-6
- Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan required by Standard 8<sup>2</sup>
- Operation and Maintenance Plan required by Standard 9

In addition to all plans and supporting information, the Stormwater Report must include a brief narrative describing stormwater management practices, including environmentally sensitive site design and LID techniques, along with a diagram depicting runoff through the proposed BMP treatment train. Plans are required to show existing and proposed conditions, identify all wetland resource areas, NRCS soil types, critical areas, Land Uses with Higher Potential Pollutant Loads (LUHPPL), and any areas on the site where infiltration rate is greater than 2.4 inches per hour. The Plans shall identify the drainage areas for both existing and proposed conditions at a scale that enables verification of supporting calculations.

As noted in the Checklist, the Stormwater Management Report shall document compliance with each of the Stormwater Management Standards as provided in the Massachusetts Stormwater Handbook. The soils evaluation and calculations shall be done using the methodologies set forth in Volume 3 of the Massachusetts Stormwater Handbook.

To ensure that the Stormwater Report is complete, applicants are required to fill in the Stormwater Report Checklist by checking the box to indicate that the specified information has been included in the Stormwater Report. If any of the information specified in the checklist has not been submitted, the applicant must provide an explanation. The completed Stormwater Report Checklist and Certification must be submitted with the Stormwater Report.

<sup>1</sup> The Stormwater Report may also include the Illicit Discharge Compliance Statement required by Standard 10. If not included in the Stormwater Report, the Illicit Discharge Compliance Statement must be submitted prior to the discharge of stormwater runoff to the post-construction best management practices.

<sup>2</sup> For some complex projects, it may not be possible to include the Construction Period Erosion and Sedimentation Control Plan in the Stormwater Report. In that event, the issuing authority has the discretion to issue an Order of Conditions that approves the project and includes a condition requiring the proponent to submit the Construction Period Erosion and Sedimentation Control Plan before commencing any land disturbance activity on the site.

# Checklist for Stormwater Report

## B. Stormwater Checklist and Certification

The following checklist is intended to serve as a guide for applicants as to the elements that ordinarily need to be addressed in a complete Stormwater Report. The checklist is also intended to provide conservation commissions and other reviewing authorities with a summary of the components necessary for a comprehensive Stormwater Report that addresses the ten Stormwater Standards.

*Note:* Because stormwater requirements vary from project to project, it is possible that a complete Stormwater Report may not include information on some of the subjects specified in the Checklist. If it is determined that a specific item does not apply to the project under review, please note that the item is not applicable (N.A.) and provide the reasons for that determination.

A complete checklist must include the Certification set forth below signed by the Registered Professional Engineer who prepared the Stormwater Report.

### Registered Professional Engineer's Certification

I have reviewed the Stormwater Report, including the soil evaluation, computations, Long-term Pollution Prevention Plan, the Construction Period Erosion and Sedimentation Control Plan (if included), the Long-term Post-Construction Operation and Maintenance Plan, the Illicit Discharge Compliance Statement (if included) and the plans showing the stormwater management system, and have determined that they have been prepared in accordance with the requirements of the Stormwater Management Standards as further elaborated by the Massachusetts Stormwater Handbook. I have also determined that the information presented in the Stormwater Checklist is accurate and that the information presented in the Stormwater Report accurately reflects conditions at the site as of the date of this permit application.

## Checklist

**Project Type:** Is the application for new development, redevelopment, or a mix of new and redevelopment?

- ☐ New development
- ☐ Redevelopment
- ☒ Mix of New Development and Redevelopment

# Checklist for Stormwater Report

---

## Checklist (continued)

**LID Measures:** Stormwater Standards require LID measures to be considered. Document what environmentally sensitive design and LID Techniques were considered during the planning and design of the project:

- ☒ No disturbance to any Wetland Resource Areas
- ☒ Site Design Practices (e.g. clustered development, reduced frontage setbacks)
- ☐ Reduced Impervious Area (Redevelopment Only)
- ☐ Minimizing disturbance to existing trees and shrubs
- ☐ LID Site Design Credit Requested:
  - ☐ Credit 1
  - ☐ Credit 2
  - ☐ Credit 3
- ☐ Use of "country drainage" versus curb and gutter conveyance and pipe
- ☐ Bioretention Cells (includes Rain Gardens)
- ☐ Constructed Stormwater Wetlands (includes Gravel Wetlands designs)
- ☐ Treebox Filter
- ☒ Water Quality Swale
- ☐ Grass Channel
- ☐ Green Roof
- ☒ Other (describe): Disconnected Roof Recharge

## Standard 1: No New Untreated Discharges

- ☒ No new untreated discharges
- ☒ Outlets have been designed so there is no erosion or scour to wetlands and waters of the Commonwealth
- ☒ Supporting calculations specified in Volume 3 of the Massachusetts Stormwater Handbook included.

# Checklist for Stormwater Report

---

## Checklist (continued)

### Standard 2: Peak Rate Attenuation

- ☐ Standard 2 waiver requested because the project is located in land subject to coastal storm flowage and stormwater discharge is to a wetland subject to coastal flooding.
- ☒ Evaluation provided to determine whether off-site flooding increases during the 100-year 24-hour storm.
- ☒ Calculations provided to show that post-development peak discharge rates do not exceed pre-development rates for the 2-year and 10-year 24-hour storms. If evaluation shows that off-site flooding increases during the 100-year 24-hour storm, calculations are also provided to show that post-development peak discharge rates do not exceed pre-development rates for the 100-year 24-hour storm.

### Standard 3: Recharge

- ☒ Soil Analysis provided.
- ☒ Required Recharge Volume calculation provided.
- ☐ Required Recharge volume reduced through use of the LID site Design Credits.
- ☒ Sizing the infiltration, BMPs is based on the following method: Check the method used.
  - ☒ Static
  - ☐ Simple Dynamic
  - ☐ Dynamic Field<sup>1</sup>
- ☐ Runoff from all impervious areas at the site discharging to the infiltration BMP.
- ☒ Runoff from all impervious areas at the site is *not* discharging to the infiltration BMP and calculations are provided showing that the drainage area contributing runoff to the infiltration BMPs is sufficient to generate the required recharge volume.
- ☒ Recharge BMPs have been sized to infiltrate the Required Recharge Volume.
- ☐ Recharge BMPs have been sized to infiltrate the Required Recharge Volume *only* to the maximum extent practicable for the following reason:
  - ☐ Site is comprised solely of C and D soils and/or bedrock at the land surface
  - ☐ M.G.L. c. 21E sites pursuant to 310 CMR 40.0000
  - ☐ Solid Waste Landfill pursuant to 310 CMR 19.000
  - ☐ Project is otherwise subject to Stormwater Management Standards only to the maximum extent practicable.
- ☒ Calculations showing that the infiltration BMPs will drain in 72 hours are provided.
- ☐ Property includes a M.G.L. c. 21E site or a solid waste landfill and a mounding analysis is included.

---

<sup>1</sup> 80% TSS removal is required prior to discharge to infiltration BMP if Dynamic Field method is used.

# Checklist for Stormwater Report

---

## Checklist (continued)

### Standard 3: Recharge (continued)

- ☒ The infiltration BMP is used to attenuate peak flows during storms greater than or equal to the 10-year 24-hour storm and separation to seasonal high groundwater is less than 4 feet and a mounding analysis is provided.
- ☒ Documentation is provided showing that infiltration BMPs do not adversely impact nearby wetland resource areas.

### Standard 4: Water Quality

The Long-Term Pollution Prevention Plan typically includes the following:

- Good housekeeping practices;
  - Provisions for storing materials and waste products inside or under cover;
  - Vehicle washing controls;
  - Requirements for routine inspections and maintenance of stormwater BMPs;
  - Spill prevention and response plans;
  - Provisions for maintenance of lawns, gardens, and other landscaped areas;
  - Requirements for storage and use of fertilizers, herbicides, and pesticides;
  - Pet waste management provisions;
  - Provisions for operation and management of septic systems;
  - Provisions for solid waste management;
  - Snow disposal and plowing plans relative to Wetland Resource Areas;
  - Winter Road Salt and/or Sand Use and Storage restrictions;
  - Street sweeping schedules;
  - Provisions for prevention of illicit discharges to the stormwater management system;
  - Documentation that Stormwater BMPs are designed to provide for shutdown and containment in the event of a spill or discharges to or near critical areas or from LUHPPL;
  - Training for staff or personnel involved with implementing Long-Term Pollution Prevention Plan;
  - List of Emergency contacts for implementing Long-Term Pollution Prevention Plan.
- ☒ A Long-Term Pollution Prevention Plan is attached to Stormwater Report and is included as an attachment to the Wetlands Notice of Intent.
  - ☒ Treatment BMPs subject to the 44% TSS removal pretreatment requirement and the one inch rule for calculating the water quality volume are included, and discharge:
    - ☒ is within the Zone II or Interim Wellhead Protection Area
    - ☐ is near or to other critical areas
    - ☐ is within soils with a rapid infiltration rate (greater than 2.4 inches per hour)
    - ☐ involves runoff from land uses with higher potential pollutant loads.
  - ☐ The Required Water Quality Volume is reduced through use of the LID site Design Credits.
  - ☒ Calculations documenting that the treatment train meets the 80% TSS removal requirement and, if applicable, the 44% TSS removal pretreatment requirement, are provided.

# Checklist for Stormwater Report

---

## Checklist (continued)

### Standard 4: Water Quality (continued)

- ☒ The BMP is sized (and calculations provided) based on:
  - ☒ The ½" or 1" Water Quality Volume or
  - ☐ The equivalent flow rate associated with the Water Quality Volume and documentation is provided showing that the BMP treats the required water quality volume.
- ☒ The applicant proposes to use proprietary BMPs, and documentation supporting use of proprietary BMP and proposed TSS removal rate is provided. This documentation may be in the form of the propriety BMP checklist found in Volume 2, Chapter 4 of the Massachusetts Stormwater Handbook and submitting copies of the TARP Report, STEP Report, and/or other third party studies verifying performance of the proprietary BMPs.
- ☐ A TMDL exists that indicates a need to reduce pollutants other than TSS and documentation showing that the BMPs selected are consistent with the TMDL is provided.

### Standard 5: Land Uses With Higher Potential Pollutant Loads (LUHPPLs)

- ☐ The NPDES Multi-Sector General Permit covers the land use and the Stormwater Pollution Prevention Plan (SWPPP) has been included with the Stormwater Report.
- ☐ The NPDES Multi-Sector General Permit covers the land use and the SWPPP will be submitted **prior to** the discharge of stormwater to the post-construction stormwater BMPs.
- ☒ The NPDES Multi-Sector General Permit does **not** cover the land use.
- ☐ LUHPPLs are located at the site and industry specific source control and pollution prevention measures have been proposed to reduce or eliminate the exposure of LUHPPLs to rain, snow, snow melt and runoff, and been included in the long term Pollution Prevention Plan.
- ☒ All exposure has been eliminated.
- ☐ All exposure has **not** been eliminated and all BMPs selected are on MassDEP LUHPPL list.
- ☐ The LUHPPL has the potential to generate runoff with moderate to higher concentrations of oil and grease (e.g. all parking lots with >1000 vehicle trips per day) and the treatment train includes an oil grit separator, a filtering bioretention area, a sand filter or equivalent.

### Standard 6: Critical Areas

- ☐ The discharge is near or to a critical area and the treatment train includes only BMPs that MassDEP has approved for stormwater discharges to or near that particular class of critical area.
- ☒ Critical areas and BMPs are identified in the Stormwater Report.

# Checklist for Stormwater Report

---

## Checklist (continued)

### Standard 7: Redevelopments and Other Projects Subject to the Standards only to the maximum extent practicable

- ☐ The project is subject to the Stormwater Management Standards only to the maximum Extent Practicable as a:
  - ☐ Limited Project
  - ☐ Small Residential Projects: 5-9 single family houses or 5-9 units in a multi-family development provided there is no discharge that may potentially affect a critical area.
  - ☐ Small Residential Projects: 2-4 single family houses or 2-4 units in a multi-family development with a discharge to a critical area
  - ☐ Marina and/or boatyard provided the hull painting, service and maintenance areas are protected from exposure to rain, snow, snow melt and runoff
  - ☐ Bike Path and/or Foot Path
  - ☐ Redevelopment Project
  - ☐ Redevelopment portion of mix of new and redevelopment.
- ☐ Certain standards are not fully met (Standard No. 1, 8, 9, and 10 must always be fully met) and an explanation of why these standards are not met is contained in the Stormwater Report.
- ☐ The project involves redevelopment and a description of all measures that have been taken to improve existing conditions is provided in the Stormwater Report. The redevelopment checklist found in Volume 2 Chapter 3 of the Massachusetts Stormwater Handbook may be used to document that the proposed stormwater management system (a) complies with Standards 2, 3 and the pretreatment and structural BMP requirements of Standards 4-6 to the maximum extent practicable and (b) improves existing conditions.

### Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control

A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan must include the following information:

- Narrative;
  - Construction Period Operation and Maintenance Plan;
  - Names of Persons or Entity Responsible for Plan Compliance;
  - Construction Period Pollution Prevention Measures;
  - Erosion and Sedimentation Control Plan Drawings;
  - Detail drawings and specifications for erosion control BMPs, including sizing calculations;
  - Vegetation Planning;
  - Site Development Plan;
  - Construction Sequencing Plan;
  - Sequencing of Erosion and Sedimentation Controls;
  - Operation and Maintenance of Erosion and Sedimentation Controls;
  - Inspection Schedule;
  - Maintenance Schedule;
  - Inspection and Maintenance Log Form.
- ☒ A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan containing the information set forth above has been included in the Stormwater Report.

# Checklist for Stormwater Report

---

## Checklist (continued)

### Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control (continued)

- ☐ The project is highly complex and information is included in the Stormwater Report that explains why it is not possible to submit the Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan with the application. A Construction Period Pollution Prevention and Erosion and Sedimentation Control has **not** been included in the Stormwater Report but will be submitted **before** land disturbance begins.
- ☐ The project is **not** covered by a NPDES Construction General Permit.
- ☐ The project is covered by a NPDES Construction General Permit and a copy of the SWPPP is in the Stormwater Report.
- ☒ The project is covered by a NPDES Construction General Permit but no SWPPP been submitted. The SWPPP will be submitted BEFORE land disturbance begins.

### Standard 9: Operation and Maintenance Plan

- ☒ The Post Construction Operation and Maintenance Plan is included in the Stormwater Report and includes the following information:
  - ☒ Name of the stormwater management system owners;
  - ☒ Party responsible for operation and maintenance;
  - ☒ Schedule for implementation of routine and non-routine maintenance tasks;
  - ☒ Plan showing the location of all stormwater BMPs maintenance access areas;
  - ☐ Description and delineation of public safety features;
  - ☒ Estimated operation and maintenance budget; and
  - ☒ Operation and Maintenance Log Form.
- ☐ The responsible party is **not** the owner of the parcel where the BMP is located and the Stormwater Report includes the following submissions:
  - ☐ A copy of the legal instrument (deed, homeowner's association, utility trust or other legal entity) that establishes the terms of and legal responsibility for the operation and maintenance of the project site stormwater BMPs;
  - ☐ A plan and easement deed that allows site access for the legal entity to operate and maintain BMP functions.

### Standard 10: Prohibition of Illicit Discharges

- ☒ The Long-Term Pollution Prevention Plan includes measures to prevent illicit discharges;
- ☐ An Illicit Discharge Compliance Statement is attached;
- ☐ NO Illicit Discharge Compliance Statement is attached but will be submitted **prior to** the discharge of any stormwater to post-construction BMPs.

Survey Area Data: Version 19, Sep 12, 2019

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Aug 29, 2014—Sep 19, 2014

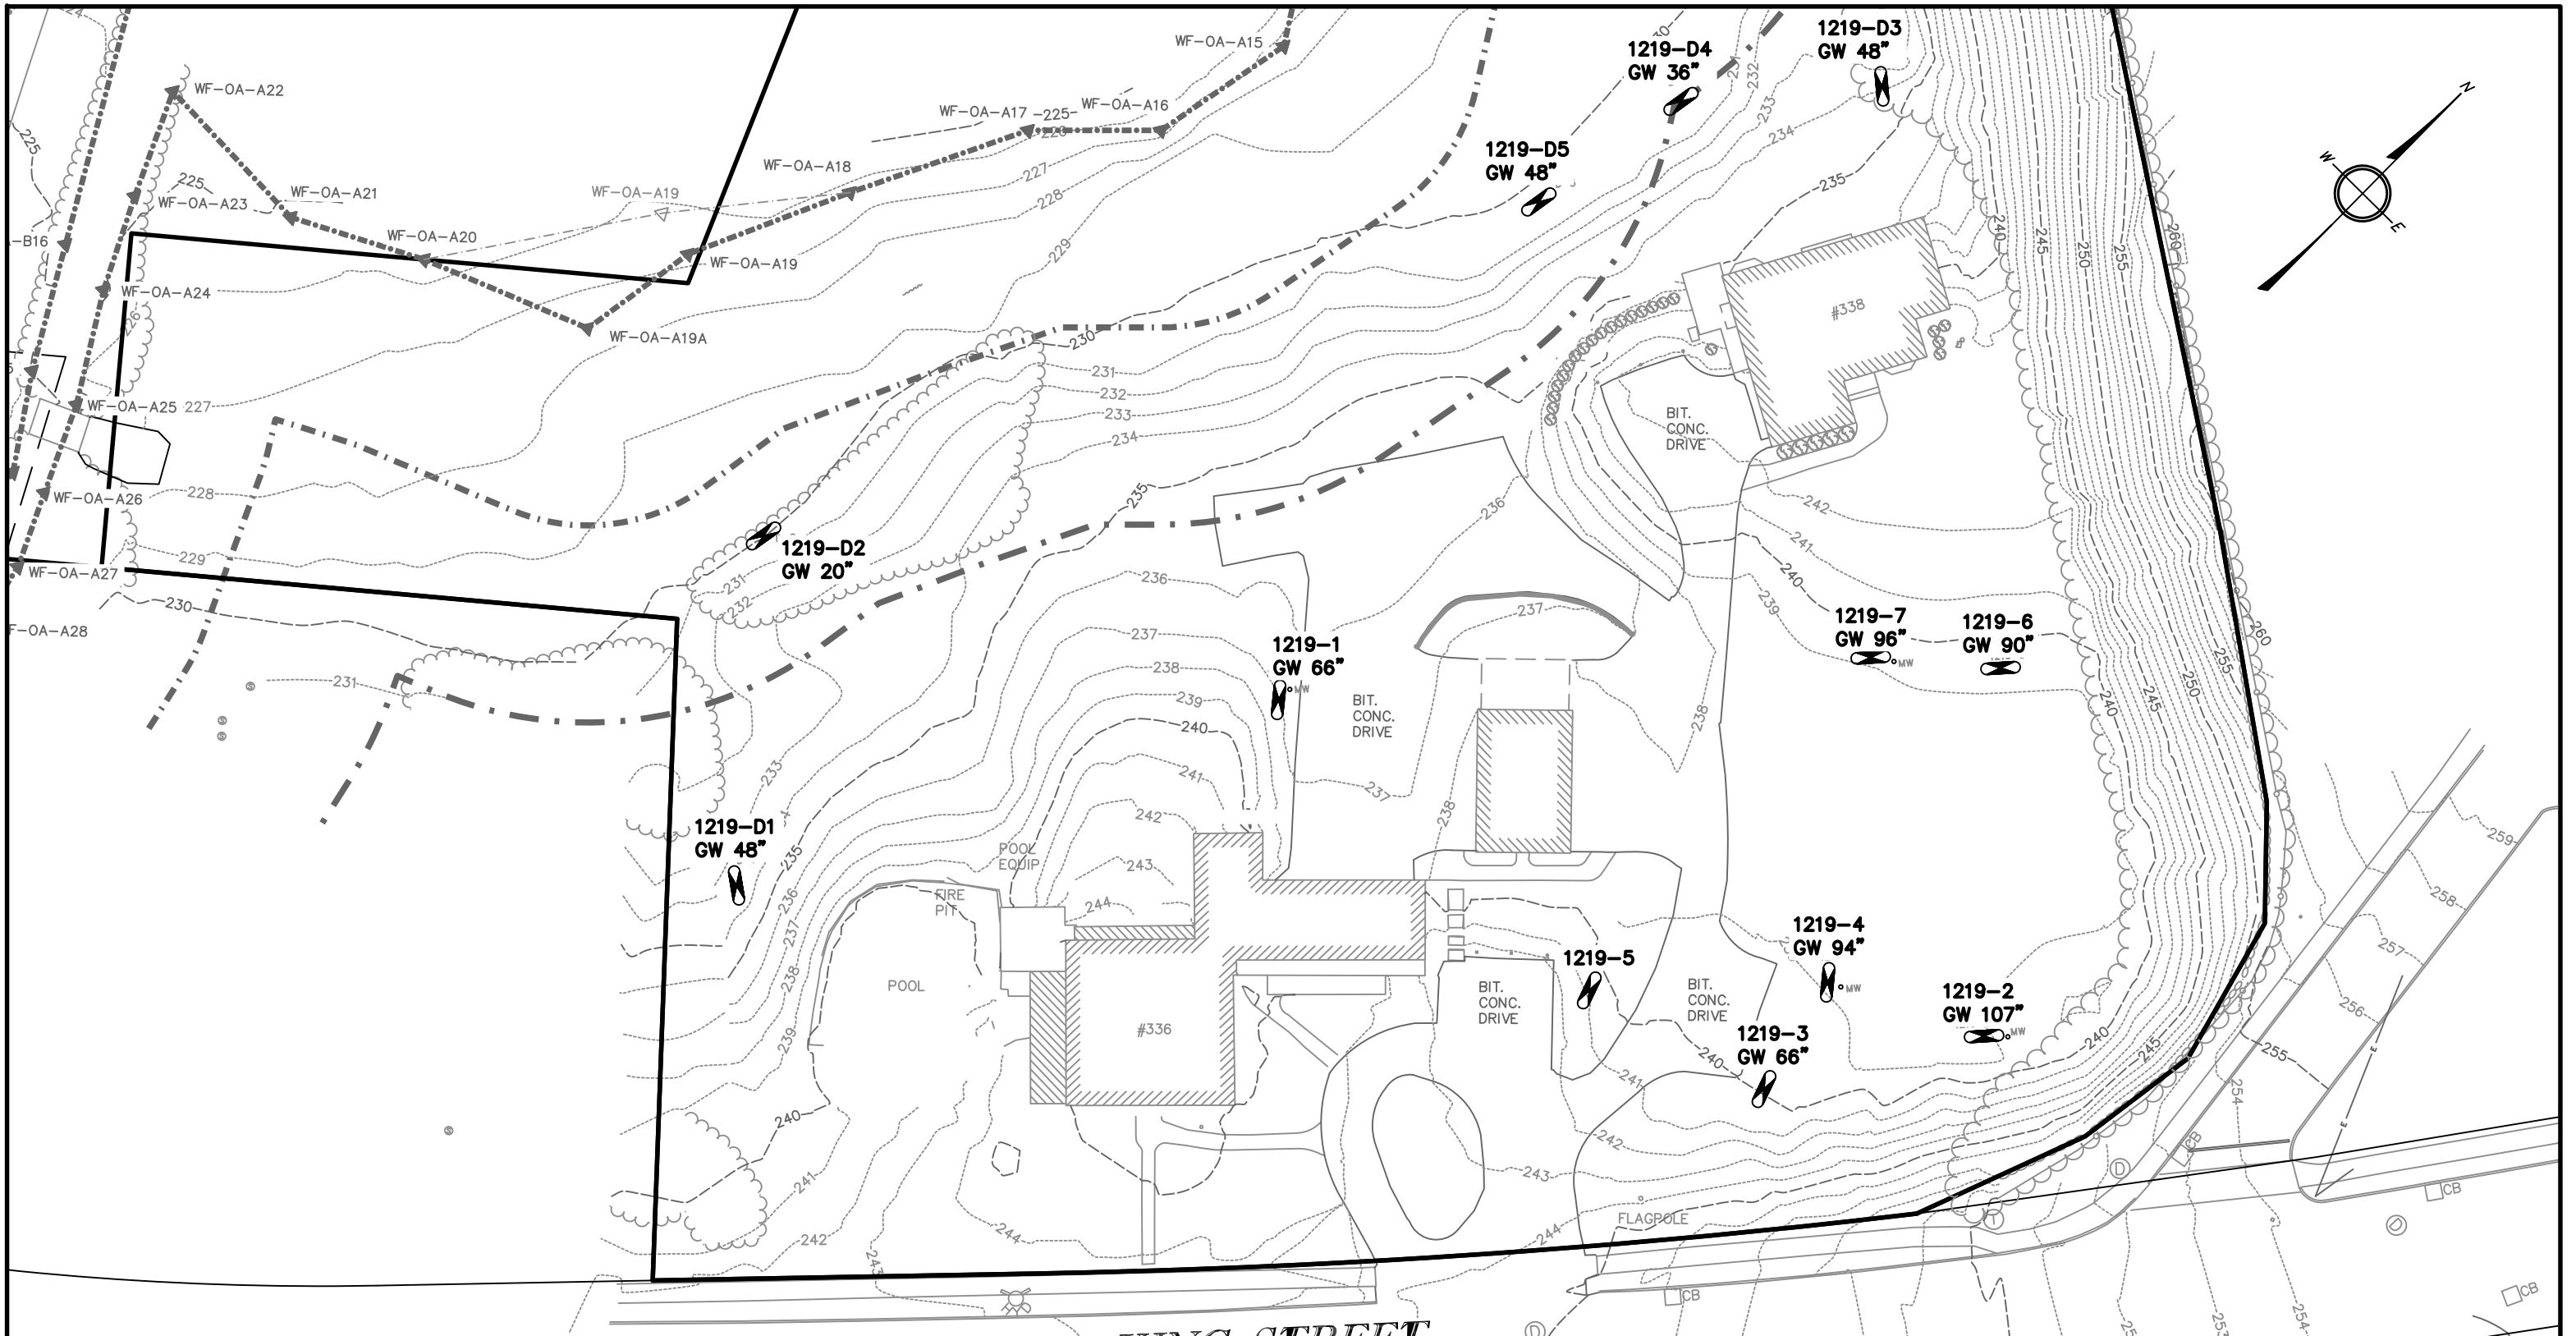

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
6A	Scarboro mucky fine sandy loam, 0 to 3 percent slopes	6.3	15.9%
32B	Wareham loamy fine sand, 0 to 5 percent slopes	15.0	37.8%
253D	Hinckley loamy sand, 15 to 25 percent slopes	2.7	6.8%
310B	Woodbridge fine sandy loam, 3 to 8 percent slopes	5.7	14.4%
623C	Woodbridge-Urban land complex, 3 to 15 percent slopes	1.5	3.7%
626B	Merrimac-Urban land complex, 0 to 8 percent slopes	8.5	21.4%
<b>Totals for Area of Interest</b>		<b>39.8</b>	<b>100.0%</b>

Location Address or Lot#: 336-338 King St.  
Littleton, MA 01460

### Determination for Seasonal High Water Table

#### Method Used:

- ☐ Depth observed standing in observation hole ..... inches .....
- ☐ Depth weeping from side of observation hole ..... inches .....
- ☒ Depth to soil mottles .....\* inches See individual Reports .....
- ☐ Ground water adjustment ..... feet .....

Index Well Number ..... Reading Date ..... Index Well Level .....

Adjustment Factor ..... Adjusted Ground Water Level .....

#### Depth of Naturally Occuring Pervious Material

Does at least four feet of naturally occurring pervious material exist in all areas  
observed throughout the area proposed for the soil absorption system? Yes

If not, what is the depth of naturally occurring pervious material? \_\_\_\_\_ Feet

#### Certification

I certify that I am currently approved by the Department of Environmental Protection  
pursuant to 310 CMR 15.017 to conduct soil evaluations and that the above analysis  
has been performed by me consistent with the training, expertise and experience described  
in 310 CMR 15.017. I further certify that the results of my soil evaluation, as indicated,  
on the attached soil evaluation form, are accurate and in accordance with 310 CMR  
15.100 through 15.107.

# National Flood Hazard Layer FIRMette

42°32'39.41"N

## Legend

SEE FTS REPORT FOR DETAILED LEGEND AND INDEX MAP FOR FIRM PANEL LAYOUT

### SPECIAL FLOOD HAZARD AREAS

- Without Base Flood Elevation (BFE) Zone A, X, AO, V
- With BFE or Depth Zone AE, A1, A2, A3, VE, A99
- Regulatory Floodway

### OTHER AREAS OF FLOOD HAZARD

- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile Zone X
- Future Conditions 1% Annual Chance Flood Hazard Zone X
- Area with Reduced Flood Risk due to Levees. See Notes. Zone X
- Area with Flood Risk due to Levees Zone O

### OTHER AREAS

- Area of Minimal Flood Hazard Zone X
- Effective LOMRs
- Area of Undetermined Flood Hazard Zone O

### GENERAL STRUCTURES

- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

### OTHER FEATURES

- Cross Sections with 1% Annual Chance Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

### MAP PANELS

- Digital Data Available
- No Digital Data Available
- Unmapped

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards.

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 11/15/2019 at 11:05:43 AM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

## GROUNDWATER RECHARGE

### Infiltration Area Requirements

Mass co. Housing  
336-338 King Street, Littleton, MA  
Project No. 191096

### Drawdown Time

(Per Massachusetts Stormwater regulations, infiltration areas must completely drain within 72 hours)

		<u>Infiltration Basin (IB)</u>	<u>Infiltration Chambers (IC)</u>
Infiltration Area Storage Volume	cf	1,331	2,780
Design infiltration Rate	in/hr	2.41	2.41
Infiltration Bottom Area	sf	445	764
Drawdown Time = Infiltration Area Storage Volume / [Design Infiltration Rate x Infiltration Area Bottom Area]			
<b>Drawdown Time (Hrs)</b>		<b>14.9</b>	<b>18.1</b>

### Mounding Analysis

Per the Massachusetts Stormwater Handbook, mounding analysis is required when "... The vertical separation from the bottom of an exfiltration system to seasonal high groundwater is less than four (4) feet and the recharge system is proposed to attenuate the peak discharge from a 10-year or higher 24-hour storm." The mounding analysis "... must show that the REQUIRED RECHARGE VOLUME is fully dewatered within 72 hours..."

			<u>Infiltration Basin (IB)</u>	<u>Infiltration Chambers (IC)</u>
Hydraulic Conductivity	(K)	ft/day	16	16
			Lower Range Standard Value for "Medium Sand" material	
Specific Yield	(Sy)		0.28	0.28

## MASTEP Technology Review

---

**Technology Name:** Stormwater Buffer Zone

**Studies Reviewed:** Verification Testing of a 4-ft Stormwater Buffer Zone Stormwater Catch Basin Treatment Unit, Alden Laboratory 2012

**Date:** 1/7/2013

**Reviewer:** Jerry Schoen

**Rating:** 2

**Brief rationale for rating:** This laboratory study in general followed New Jersey protocols for laboratory testing, but only test 7 runs were performed (15 or more recommended). The report lacks details on quality control procedures.

**Other Comments:**

- ASTM 3977, the Suspended Sediment Concentration method was used.
- Influent sediment concentration generally 200 mg/l range, within NJCAT guidelines.
- Sediment mix used had a mean particle size of 70 microns, within NJCAT guidelines.
- 5 flow rates tested, ranging from < 10% to 125% of system design flow.
- Scour test was performed according to NJCAT guidelines. No scour found.
- Sediment removal efficiency ranged from 41% - 77%, depending on flow rates tested. Overall removal efficiency of 62.6% reported.

## Stormwater Management Standard 4 TSS REMOVAL

Mass co. Housing  
336-338 King Street, Littleton, MA  
Project No. 191096

Process Train No.	Impervious Area (SF)	BMP Type	TSS Removal Rate	TSS Remaining at Discharge	TSS Removed at Discharge
SC-2.5	11,908	SP	63%	37%	<b>63%</b>
		FB / INF	80%	7%	<b>93%</b>
SC-2.6	4,925	SP	63%	37%	<b>63%</b>
		WQS	70%	11%	<b>89%</b>
SC-2.7	2,455	SP	63%	37%	<b>63%</b>
		WQS	70%	11%	<b>89%</b>

\* - Impervious areas within the remaining Subcatchments on site are limited to proposed dwelling roofs and walkways which will not accumulate or produce sediment. Any runoff produced by these areas must flow through long stretches of existing grass or captured and discharging directly into the proposed Infiltration Basin/Infiltration Chambers/Water Quality Swale prior to reaching a design analysis point and have been considered as clean runoff for the above calculations.

### **ABBREVIATIONS:**

TSS=total suspended solids; SF=square feet; SC=subcatchment; GC=grassed channel; BMP=best management practices; CB=deep sump hooded catch basin; FB = Sediment Forebay; INF=infiltration basin; WB=wet basin; SP=Silt Prison Catch Basin  
WQS= Water Quality Swale; IC= Infiltration Chambers
