Fax: 978 952-2321

Filing Procedure Summary

Submit this checklist with application
(rev December 20, 2021)

The following procedures must be followed when filing under M.G.L. c. 131, §40 or the Littleton Wetlands Protection, Chapter 171 for a wetland permit. The procedure applies to Notice of Intents, Abbreviated Notice of Intents, Request for Determinations, and Abbreviated Notice of Resource Area Determinations.

This summary is not to be considered all inclusive and in no way should an applicant misconstrue its contents to replace any part of M.G.L. c. 131, §40 or the Littleton Wetlands Protection, Chapter 171.

__X__ (1) one electronic file of complete submittal emailed to the Conservation Agent and 2 hard copies (with full sized, color plans) filed with the Conservation Commission hand delivered or mailed and received in the office before noon of filing deadline. Additional copies may be required of some projects. Please call ahead to determine meeting dates and filing deadlines.

__X__ (1) one complete copy of the application must be filed with Department of Environmental Protection at:
Department of Environmental Protection
8 New Bond Street
Worcester, Massachusetts 01608

During COVID Emergency Provisions, MADEP also requires an electronic file sent to CERO_NOI@mass.gov (underscore between CERO and NOI)
With the Subject line based on this format "LITTLETON –xxx-STREET ADDRESS – APPLICANT NAME. The "xxx" will be NOI, ANRAD or RDA

__X__ The applicant must include a certified list of abutters (including those in adjacent Towns) located within 100 feet of the property boundaries, according to the most recent records of the Town Assessors, or as determined by MADEP policy on abutter notification. If a Town line is within 300 feet of the Limit of Work, then that Town's Conservation Commission must also be notified.

__X__ The applicant, at the applicant's expense, shall post to each abutter (and owner if owner is not applicant) by Certificated Mail (Return Receipt Requested), or by hand delivery with signature of abutter a copy of the Abutter Notification Form. An Affidavit of Service of such notification shall also be provided. Abutters' signed acknowledgement of notification (ie, green Return Receipt cards) shall be provide at the first public meeting/hearing. See the Littleton Conservation Commission website for the Abutter Notification Form or call the Agent.

PROJECT NAME/ADDRESS: Reconstruction of Foster St. 238-305 Foster St, 221-241 Taylor St DATE: 9/19/2023

X At the applicant's expense, the Commission shall publish a legal notice in a newspaper of local circulation announcing the public hearing. The Notice will be published at least five (5) working days prior to the meeting and will include the date, time and location of the public hearing. The newspaper will bill the applicant directly. This bill must be paid before the legal notice will be published. **Please provide information on who will pay the newspaper (owner, applicant and/or representative) with the application.**

Name	Stephen Jahnle
Company (if applicable)	Town of Littleton DPW
Mailing Address	39 Ayer Rd, Littleton, MA 01460
E-mail	sjahnle@littletonma.org
Phone	978-540-2670

N/A (Town is the applicant) Filing fees for MADEP and Town of Littleton under the MA Wetlands Protection Act regulations, as well as the Littleton Wetlands Protection ByLaw filing fee.

PROJECT NAME/ADDRESS: Reconstruction of Foster St. 238-305 Foster St, 221-241 Taylor St DATE: 9/19/2023

Plans Checklist to accompany application for Notice of Intent (NOI). This is a Bylaw Supplemental form to aid you in submitting complete and appropriate information on your plans. These are suggested/expected items to be shown on the plans but will not necessarily be applicable to all projects. Note that the Commission generally requires a colored plan for presentation purposes.

All lines must be marked X or identified as Not Applicable ("N/A"), or noted as to where the information can be found.

(1) X North arrow X Locus insert X Bar scale (preferably 1 in = 20 to 40 ft.)

(2) Title Block with Following Information:

- X Plan Title
- X Applicant's Name(s), address & phone
- X Property Owner Name(s), address & phone
- X Location/street name & number
- X Assessor map, lot, Registry book, page on all lots w/activity
- X Plan preparer's name, title, stamp, company name, address phone & fax
- X Date plan prepared, last revised, and revision notes

(3) X Existing contours

(4) X Existing structure(s) with natural and man-made features, including stone walls and trails

(5) X Trees over 8-inch diameter breast height within resource areas and buffer zones

(6) X Property lines; clearly mark limits of review area if entire property is not under review

(7) X Existing utilities, rights-of-way, easements, ancient ways or other deeded ways

(8) X Name of wetland scientist responsible for identifying wetland boundaries

(9) X Date wetland was flagged (must be no more than 3 years prior to current date)

(10) X Wetland resource area boundaries with flag numbers

(11) X 100 foot buffer zone limits and 50-foot No Disturb limit

(12) X Notations identifying all wetland types and delineation methodology

(13) X Shortest distance to all resource areas from closest proposed structure (use arrow)

PROJECT NAME/ADDRESS: Reconstruction of Foster St. 238-305 Foster St, 221-241 Taylor St DATE: 9/19/2023

(14) _X_ Shortest distance to all resource areas from closest point of erosion control materials

(15) _X_ Proposed contours (one foot increments)

(16) _X_ Proposed location of utility lines

(17) _X_ Proposed structure(s) (including driveway work, septic components, etc)

(18) _X_ Existing and proposed stormwater management features (including temporary controls)

(19) _X_ Watersheds and drainage areas

(20) _X_ Test pit, boring holes and logs

(21) _X_ Conservation post detail and plaque detail

(22) _X_ Location of temporary stockpiles w/notation of content (e.g. excavated soils)

(23) _X_ Location of snow storage areas

(24) _X_ Location of dumpster(s)

(25) _X_ Cross-sections, particularly at key areas of slopes near wetland resource areas

(26) _X_ Mitigation plans as needed

(27) _X_ Construction sequencing

(28) _X_ Details as applicable, including type of erosion controls

One full sized color plans (and presentation plan) should be colored as follows.

Check if present	Feature	Line Type
x	Existing tree line	Green solid
x	Proposed tree line	Green dashed
x	Bordering Vegetated Wetlands*	Dark blue solid
x	Bank/Land Under Water	Light blue dashed
x	100 foot buffer from BVW and/or Bank	Yellow solid
x	50 foot No Disturb limit from BVW and/or Bank	Yellow dashed
x	Vernal Pool	Purple solid
x	Vernal Pool 100 foot	Purple dashed
x	Bordering Lands Subject to Flooding	Orange solid
x	Isolated Lands Subject to Flooding	Orange dashed
x	Mean Annual High Water	Light red solid
x	100 foot and 200 foot Riverfront Area	Light red dashed
x	Bank, Wetland, Land Under Water, Riverfront Area and Floodplain	Red solid with differentiated stippling/cross hatching
x	Mitigation Area	Red dashed line with differentiated stippling/cross hatching
x	Erosion controls	Brown dashed
x	Limit of work	Brown solid

*Note locations of any federal, non-state isolated vegetated wetlands

PROJECT NAME/ADDRESS: Reconstruction of Foster St. 238-305 Foster St, 221-241 Taylor St DATE: 9/19/2023

NOTICE OF INTENT

Submitted to the Town of Littleton, MA Conservation Commission for the Reconstruction of Foster Street Project in Littleton, MA

A. General Information

1. Project Location (**Note:** electronic filers will click on button to locate project site):

Foster Street — a. Street Address
Littleton — b. City/Town
01460 — c. Zip Code

Latitude and Longitude:
42.519123 — d. Latitude
-71.502669 — e. Longitude

1425 — f. Assessors Map/Plat Number
R10 2 1 — g. Parcel /Lot Number

2. Applicant:

Stephen — a. First Name
Jahnle — b. Last Name
Department of Public Works — c. Organization
39 Ayer Rd — d. Street Address
Littleton — e. City/Town
MA — f. State
01460 — g. Zip Code
978-540-2670 — h. Phone Number
i. Fax Number
sjahnle@littletonma.org — j. Email Address

3. Property owner (required if different from applicant): ☐ Check if more than one owner

Town of Littleton — a. First Name
b. Last Name
Town of Littleton-Department of Public Works — c. Organization
39 Ayer Rd — d. Street Address
Littleton — e. City/Town
MA — f. State
01460 — g. Zip Code
978-540-2670 — h. Phone Number
i. Fax Number
j. Email address

4. Representative (if any):

Dan — a. First Name
Delany, P.E. — b. Last Name
Fuss & O'Neill — c. Company
1550 Main Street, Suite 400 — d. Street Address
Springfield — e. City/Town
MA — f. State
01103 — g. Zip Code
800-286-2469 — h. Phone Number
i. Fax Number
ddelany@fando.com — j. Email address

5. Total WPA Fee Paid (from NOI Wetland Fee Transmittal Form):

N/A — a. Total Fee Paid
N/A — b. State Fee Paid
N/A — c. City/Town Fee Paid

City/Town

A. General Information (continued)

6. General Project Description:

Work includes pavement reclamation and full depth reconstruction along Foster Street, construction of a 10 foot wide shared-use path, addition of curbing in select areas, installation of a new underground water main, new catch basins, realignment of the Grimes Lane & Foster Street intersection, and the addition of midblock crosswalks.

7a. Project Type Checklist: (Limited Project Types see Section A. 7b.)

1. ☐ Single Family Home
2. ☐ Residential Subdivision
3. ☐ Commercial/Industrial
4. ☐ Dock/Pier
5. ☐ Utilities
6. ☐ Coastal engineering Structure
7. ☐ Agriculture (e.g., cranberries, forestry)
8. ☒ Transportation
9. ☐ Other

7b. Is any portion of the proposed activity eligible to be treated as a limited project (including Ecological Restoration Limited Project) subject to 310 CMR 10.24 (coastal) or 310 CMR 10.53 (inland)?

1. ☒ Yes ☐ No

If yes, describe which limited project applies to this project. (See 310 CMR 10.24 and 10.53 for a complete list and description of limited project types)

310 CMR 10.53(3)(f)
2. Limited Project Type

If the proposed activity is eligible to be treated as an Ecological Restoration Limited Project (310 CMR10.24(8), 310 CMR 10.53(4)), complete and attach Appendix A: Ecological Restoration Limited Project Checklist and Signed Certification.

8. Property recorded at the Registry of Deeds for:

NA (roadway right of way)
a. County

b. Certificate # (if registered land)

c. Book

d. Page Number

B. Buffer Zone & Resource Area Impacts (temporary & permanent)

1. ☒ Buffer Zone Only – Check if the project is located only in the Buffer Zone of a Bordering Vegetated Wetland, Inland Bank, or Coastal Resource Area.
2. ☐ Inland Resource Areas (see 310 CMR 10.54-10.58; if not applicable, go to Section B.3, Coastal Resource Areas).

Check all that apply below. Attach narrative and any supporting documentation describing how the project will meet all performance standards for each of the resource areas altered, including standards requiring consideration of alternative project design or location.

Massachusetts Department of Environmental Protection
Bureau of Resource Protection - Wetlands

WPA Form 3 – Notice of Intent

Massachusetts Wetlands Protection Act M.G.L. c. 131, §40

Provided by MassDEP:

MassDEP File Number

Document Transaction Number

Littleton
City/Town

B. Buffer Zone & Resource Area Impacts (temporary & permanent) (cont'd)

For all projects affecting other Resource Areas, please attach a narrative explaining how the resource area was delineated.

Resource Area	Size of Proposed Alteration	Proposed Replacement (if any)
a. ☐ Bank	0 (1. linear feet)	0 (2. linear feet)
b. ☐ Bordering Vegetated Wetland	0 (1. square feet)	0 (2. square feet)
c. ☐ Land Under Waterbodies and Waterways	0 (1. square feet) 0 (3. cubic yards dredged)	0 (2. square feet)

Resource Area	Size of Proposed Alteration	Proposed Replacement (if any)
d. ☐ Bordering Land Subject to Flooding	1. square feet	2. square feet
	3. cubic feet of flood storage lost	4. cubic feet replaced
e. ☐ Isolated Land Subject to Flooding	1. square feet	
	2. cubic feet of flood storage lost	3. cubic feet replaced

f. ☐ Riverfront Area

1. Name of Waterway (if available) - **specify coastal or inland**

2. Width of Riverfront Area (check one):

☐ 25 ft. - Designated Densely Developed Areas only

☐ 100 ft. - New agricultural projects only

☐ 200 ft. - All other projects

3. Total area of Riverfront Area on the site of the proposed project: _____ square feet

4. Proposed alteration of the Riverfront Area:

a. total square feet _____ b. square feet within 100 ft. _____ c. square feet between 100 ft. and 200 ft. _____

5. Has an alternatives analysis been done and is it attached to this NOI? ☐ Yes ☐ No

6. Was the lot where the activity is proposed created prior to August 1, 1996? ☐ Yes ☐ No

3. ☐ Coastal Resource Areas: (See 310 CMR 10.25-10.35)

Note: for coastal riverfront areas, please complete **Section B.2.f**. above.

B. Buffer Zone & Resource Area Impacts (temporary & permanent) (cont'd)

Check all that apply below. Attach narrative and supporting documentation describing how the project will meet all performance standards for each of the resource areas altered, including standards requiring consideration of alternative project design or location.

Online Users: Include your document transaction number (provided on your receipt page) with all supplementary information you submit to the Department.

Resource Area	Size of Proposed Alteration	Proposed Replacement (if any)
a. ☐ Designated Port Areas	Indicate size under Land Under the Ocean, below	
b. ☐ Land Under the Ocean	1. square feet 2. cubic yards dredged	
c. ☐ Barrier Beach	Indicate size under Coastal Beaches and/or Coastal Dunes below	
d. ☐ Coastal Beaches	1. square feet	2. cubic yards beach nourishment
e. ☐ Coastal Dunes	1. square feet	2. cubic yards dune nourishment

Resource Area	Size of Proposed Alteration	Proposed Replacement (if any)
f. ☐ Coastal Banks	1. linear feet	
g. ☐ Rocky Intertidal Shores	1. square feet	
h. ☐ Salt Marshes	1. square feet	2. sq ft restoration, rehab., creation
i. ☐ Land Under Salt Ponds	1. square feet 2. cubic yards dredged	
j. ☐ Land Containing Shellfish	1. square feet	
k. ☐ Fish Runs	Indicate size under Coastal Banks, inland Bank, Land Under the Ocean, and/or inland Land Under Waterbodies and Waterways, above 1. cubic yards dredged	
l. ☐ Land Subject to Coastal Storm Flowage	1. square feet	

4. ☐ Restoration/Enhancement

If the project is for the purpose of restoring or enhancing a wetland resource area in addition to the square footage that has been entered in Section B.2.b or B.3.h above, please enter the additional amount here.

a. square feet of BVW

b. square feet of Salt Marsh

5. ☐ Project Involves Stream Crossings

a. number of new stream crossings

b. number of replacement stream crossings

C. Other Applicable Standards and Requirements

☐ This is a proposal for an Ecological Restoration Limited Project. Skip Section C and complete Appendix A: Ecological Restoration Limited Project Checklists – Required Actions (310 CMR 10.11).

Streamlined Massachusetts Endangered Species Act/Wetlands Protection Act Review

1. Is any portion of the proposed project located in **Estimated Habitat of Rare Wildlife** as indicated on the most recent Estimated Habitat Map of State-Listed Rare Wetland Wildlife published by the Natural Heritage and Endangered Species Program (NHESP)? To view habitat maps, see the *Massachusetts Natural Heritage Atlas* or go to http://maps.massgis.state.ma.us/PRI_EST_HAB/viewer.htm.

a. ☐ Yes ☒ No

If yes, include proof of mailing or hand delivery of NOI to:

Natural Heritage and Endangered Species Program
Division of Fisheries and Wildlife
1 Rabbit Hill Road
Westborough, MA 01581

04/18/2023
b. Date of map

If *yes*, the project is also subject to Massachusetts Endangered Species Act (MESA) review (321 CMR 10.18). To qualify for a streamlined, 30-day, MESA/Wetlands Protection Act review, please complete Section C.1.c, and include requested materials with this Notice of Intent (NOI); *OR* complete Section C.2.f, if applicable. *If MESA supplemental information is not included with the NOI, by completing Section 1 of this form, the NHESP will require a separate MESA filing which may take up to 90 days to review (unless noted exceptions in Section 2 apply, see below).*

c. Submit Supplemental Information for Endangered Species Review*

1. ☐ Percentage/acreage of property to be altered:

(a) within wetland Resource Area _____ percentage/acreage

(b) outside Resource Area _____ percentage/acreage

2. ☐ Assessor's Map or right-of-way plan of site

2. ☐ Project plans for entire project site, including wetland resource areas and areas outside of wetlands jurisdiction, showing existing and proposed conditions, existing and proposed tree/vegetation clearing line, and clearly demarcated limits of work **

(a) ☐ Project description (including description of impacts outside of wetland resource area & buffer zone)

(b) ☐ Photographs representative of the site

* Some projects **not** in Estimated Habitat may be located in Priority Habitat, and require NHESP review (see https://www.mass.gov/ma-endangered-species-act-mesa-regulatory-review).
Priority Habitat includes habitat for state-listed plants and strictly upland species not protected by the Wetlands Protection Act.

** MESA projects may not be segmented (321 CMR 10.16). The applicant must disclose full development plans even if such plans are not required as part of the Notice of Intent process.

Massachusetts Department of Environmental Protection
Bureau of Resource Protection - Wetlands
WPA Form 3 – Notice of Intent
Massachusetts Wetlands Protection Act M.G.L. c. 131, §40

Provided by MassDEP:
MassDEP File Number
Document Transaction Number
Littleton
City/Town

C. Other Applicable Standards and Requirements (cont'd)

(c) ☐ MESA filing fee (fee information available at https://www.mass.gov/how-to/how-to-file-for-a-mesa-project-review).
Make check payable to "Commonwealth of Massachusetts - NHESP" and ***mail to NHESP*** at above address

*Projects altering **10 or more acres** of land, also submit:*

(d) ☐ Vegetation cover type map of site

(e) ☐ Project plans showing Priority & Estimated Habitat boundaries

(f) OR Check One of the Following

1. ☐ Project is exempt from MESA review.
Attach applicant letter indicating which MESA exemption applies. (See 321 CMR 10.14, https://www.mass.gov/service-details/exemptions-from-review-for-projectsactivities-in-priority-habitat; the NOI must still be sent to NHESP if the project is within estimated habitat pursuant to 310 CMR 10.37 and 10.59.)

2. ☐ Separate MESA review ongoing. a. NHESP Tracking # b. Date submitted to NHESP

3. ☐ Separate MESA review completed.
Include copy of NHESP "no Take" determination or valid Conservation & Management Permit with approved plan.

3. For coastal projects only, is any portion of the proposed project located below the mean high water line or in a fish run?

a. ☒ Not applicable – project is in inland resource area only b. ☐ Yes ☐ No

If yes, include proof of mailing, hand delivery, or electronic delivery of NOI to either:

South Shore - Cohasset to Rhode Island border, and the Cape & Islands:

Division of Marine Fisheries -
Southeast Marine Fisheries Station
Attn: Environmental Reviewer
836 South Rodney French Blvd.
New Bedford, MA 02744
Email: dmf.envreview-south@mass.gov

North Shore - Hull to New Hampshire border:

Division of Marine Fisheries -
North Shore Office
Attn: Environmental Reviewer
30 Emerson Avenue
Gloucester, MA 01930
Email: dmf.envreview-north@mass.gov

Also if yes, the project may require a Chapter 91 license. For coastal towns in the Northeast Region, please contact MassDEP's Boston Office. For coastal towns in the Southeast Region, please contact MassDEP's Southeast Regional Office.

c. ☐ Is this an aquaculture project? d. ☐ Yes ☒ No

If yes, include a copy of the Division of Marine Fisheries Certification Letter (M.G.L. c. 130, § 57).

Massachusetts Department of Environmental Protection
Bureau of Resource Protection - Wetlands

WPA Form 3 – Notice of Intent

Massachusetts Wetlands Protection Act M.G.L. c. 131, §40

Provided by MassDEP:

MassDEP File Number

Document Transaction Number

Littleton

C. Other Applicable Standards and Requirements (cont'd)

Online Users: Include your document transaction number (provided on your receipt page) with all supplementary information you submit to the Department.

4. Is any portion of the proposed project within an Area of Critical Environmental Concern (ACEC)?

   a. ☐ Yes ☒ No If yes, provide name of ACEC (see instructions to WPA Form 3 or MassDEP Website for ACEC locations). **Note:** electronic filers click on Website.

   b. ACEC

5. Is any portion of the proposed project within an area designated as an Outstanding Resource Water (ORW) as designated in the Massachusetts Surface Water Quality Standards, 314 CMR 4.00?

   a. ☐ Yes ☒ No

6. Is any portion of the site subject to a Wetlands Restriction Order under the Inland Wetlands Restriction Act (M.G.L. c. 131, § 40A) or the Coastal Wetlands Restriction Act (M.G.L. c. 130, § 105)?

   a. ☐ Yes ☒ No

7. Is this project subject to provisions of the MassDEP Stormwater Management Standards?

   a. ☒ Yes. Attach a copy of the Stormwater Report as required by the Stormwater Management Standards per 310 CMR 10.05(6)(k)-(q) and check if:

      1. ☐ Applying for Low Impact Development (LID) site design credits (as described in Stormwater Management Handbook Vol. 2, Chapter 3)

      2. ☒ A portion of the site constitutes redevelopment

      3. ☐ Proprietary BMPs are included in the Stormwater Management System.

   b. ☐ No. Check why the project is exempt:

      1. ☐ Single-family house

      2. ☐ Emergency road repair

      3. ☐ Small Residential Subdivision (less than or equal to 4 single-family houses or less than or equal to 4 units in multi-family housing project) with no discharge to Critical Areas.

D. Additional Information

☐ This is a proposal for an Ecological Restoration Limited Project. Skip Section D and complete Appendix A: Ecological Restoration Notice of Intent – Minimum Required Documents (310 CMR 10.12).

Applicants must include the following with this Notice of Intent (NOI). See instructions for details.

Online Users: Attach the document transaction number (provided on your receipt page) for any of the following information you submit to the Department.

1. ☒ USGS or other map of the area (along with a narrative description, if necessary) containing sufficient information for the Conservation Commission and the Department to locate the site. (Electronic filers may omit this item.)

2. ☒ Plans identifying the location of proposed activities (including activities proposed to serve as a Bordering Vegetated Wetland [BVW] replication area or other mitigating measure) relative to the boundaries of each affected resource area.

F. Signatures and Submittal Requirements

I hereby certify under the penalties of perjury that the foregoing Notice of Intent and accompanying plans, documents, and supporting data are true and complete to the best of my knowledge. I understand that the Conservation Commission will place notification of this Notice in a local newspaper at the expense of the applicant in accordance with the wetlands regulations, 310 CMR 10.05(5)(a).

I further certify under penalties of perjury that all abutters were notified of this application, pursuant to the requirements of M.G.L. c. 131, § 40. Notice must be made by Certificate of Mailing or in writing by hand delivery or certified mail (return receipt requested) to all abutters within 100 feet of the property line of the project location.

1. Signature of Applicant

2. Date: 9/5/23

3. Signature of Property Owner (if different)

4. Date

5. Signature of Representative (if any)

6. Date: 9/18/23

For Conservation Commission:
Two copies of the completed Notice of Intent (Form 3), including supporting plans and documents, two copies of the NOI Wetland Fee Transmittal Form, and the city/town fee payment, to the Conservation Commission by certified mail or hand delivery.

For MassDEP:
One copy of the completed Notice of Intent (Form 3), including supporting plans and documents, one copy of the NOI Wetland Fee Transmittal Form, and a **copy** of the state fee payment to the MassDEP Regional Office (see Instructions) by certified mail or hand delivery.

Other:
If the applicant has checked the "yes" box in any part of Section C, Item 3, above, refer to that section and the Instructions for additional submittal requirements.

The original and copies must be sent simultaneously. Failure by the applicant to send copies in a timely manner may result in dismissal of the Notice of Intent.

B. Fees

To calculate filing fees, refer to the category fee list and examples in the instructions for filling out WPA Form 3 (Notice of Intent).

Fee should be calculated using the following process & worksheet. ***Please see Instructions before filling out worksheet.***

Step 1/Type of Activity: Describe each type of activity that will occur in wetland resource area and buffer zone.

Step 2/Number of Activities: Identify the number of each type of activity.

Step 3/Individual Activity Fee: Identify each activity fee from the six project categories listed in the instructions.

Step 4/Subtotal Activity Fee: Multiply the number of activities (identified in Step 2) times the fee per category (identified in Step 3) to reach a subtotal fee amount. Note: If any of these activities are in a Riverfront Area in addition to another Resource Area or the Buffer Zone, the fee per activity should be multiplied by 1.5 and then added to the subtotal amount.

Step 5/Total Project Fee: Determine the total project fee by adding the subtotal amounts from Step 4.

Step 6/Fee Payments: To calculate the state share of the fee, divide the total fee in half and subtract $12.50. To calculate the city/town share of the fee, divide the total fee in half and add $12.50.

Massachusetts Department of Environmental Protection
Bureau of Resource Protection - Wetlands

NOI Wetland Fee Transmittal Form

Massachusetts Wetlands Protection Act M.G.L. c. 131, §40

B. Fees (continued)

Step 1/Type of Activity	Step 2/Number of Activities	Step 3/Individual Activity Fee	Step 4/Subtotal Activity Fee

Step 5/Total Project Fee: _____

Step 6/Fee Payments:

Total Project Fee:	N/A Fee exempt a. Total Fee from Step 5
State share of filing Fee:	N/A b. 1/2 Total Fee **less $**12.50
City/Town share of filling Fee:	N/A c. 1/2 Total Fee **plus** $12.50

C. Submittal Requirements

a.) Complete pages 1 and 2 and send with a check or money order for the state share of the fee, payable to the Commonwealth of Massachusetts.

Department of Environmental Protection
Box 4062
Boston, MA 02211

b.) **To the Conservation Commission:** Send the Notice of Intent or Abbreviated Notice of Intent; a **copy** of this form; and the city/town fee payment.

To MassDEP Regional Office (see Instructions): Send a copy of the Notice of Intent or Abbreviated Notice of Intent; a **copy** of this form; and a **copy** of the state fee payment. (E-filers of Notices of Intent may submit these electronically.)

2 Executive Summary

Pursuant to the Massachusetts Wetland Protection Act, M.G.L.c. 131 § 40, 310 CMR. 10.00, the Town of Littleton is the applicant for this Notice of Intent (NOI) proposing a linear transportation improvement project that will redevelop Foster Street between Taylor Street and Balsam Lane, replace the surface of Taylor Street for 205 feet, and realign the intersection of Grimes Lane at Foster Street. A new 10-foot wide separated shared-use path will be created parallel to Foster Street while the road surface on Foster St will be narrowed by 4 feet. The project addresses vehicular, pedestrian, and bicycle safety. The project proposes an improved stormwater drainage system to the maximum extent practical for a redevelopment project. Upgrades are proposed to some existing catch basins. The project will also include the replacement of a 10 inch water main underneath Foster Street in an effort to 'dig once' and reduce disturbance to the corridor.

The project is eligible as a limited project under 10.53(3)(f):

> " Maintenance and improvement of existing public roadways, but limited to widening less than a single lane, adding shoulders, correcting substandard intersections, and improving inadequate drainage systems."

Because the project will not widen the road by the width of one lane the project is eligible as a redevelopment project for stormwater management therefore the Massaschusetts Stormwater Management Standards are proposed to be met to the maximum extent practicable.

The project proposes permanent and temporary impacts to the 100-ft Buffer Zone and the Town of Littleton 50-ft No Disturbance Zone. The applicant is requesting a Waiver from the Commission from the provisions of Section 4.2, 50-ft No Disturb Zone, under the relevant provisions of Section 1.4(2) of the Town of Littleton Wetland Protection Regulations.

3 Existing Conditions

3.1 Existing Site Description

The project is located on Foster Street in Littleton, MA between Taylor Street and Balsam Lane. A locus map of the project area is provided in the attached Figure 1.

The project is located in the Merrimack Watershed. The receiving waters for the project include Beaver Brook, a category 3 impaired waterway for bacteria/pathogens and Mill Pond, a freshwater lake and a category 5 impaired waterway for not supporting aesthetic, primary contact, or secondary contact due to macrophytes.

A sample of site photos along the corridor is attached in Appendix E. The dimensions of the project limits are:

- The project length on Foster Street is 3,936 ft (0.75 mi).
- The project length on Talyor Street is 205 ft extending north and south from the intersection with Foster Street.
- The project length on Grimes Lane is 145 ft extending southeast from the intersection with Foster Street.
- The total project length is therefore 4,286 ft (0.81 mi).
- The project area is traversed via an overhead bridge by Massachusetts State Route 2. No work is proposed on the bridge structure.
- The project area is also traversed at-grade by a 30 ft-wide double-track rail crossing of the MBTA Fitchburg Line. No work is proposed on the tracks.
- The total work area of the project limits sums to 5.37 acres within the limits of grading.

The Town of Littleton owns roadway right-of-way (ROW) layouts that vary between 40-70 feet wide in the project area on Foster Street and Taylor Street. On Grimes Lane however, the Town layout narrows to 20-40 feet in width.

The land surrounding the project area is part of the Boston Metropolitan Statistical Area (MSA) Large Urbanized Area. The surrounding land use is a variety of uses including industrial, commercial, single-family residential, and the I-495/Littleton commuter rail station owned by the MBTA. Several adjacent properties have maintained a rural historical character.

The existing pavement on Taylor Street is generally 44 ft wide consisting of two 12 ft wide lanes and 10 ft paved shoulders on each roadside. Taylor Street is classified as an urban collector road and has a speed limit of 35 mph. There are currently no bicycle or pedestrian facilities along Taylor Street in the project limits.

Existing drainage on Taylor Street is mostly conveyed by runoff infiltration from the edge of road to the adjacent vegetated areas. Taylor Street has two catch basins conveying closed stormwater drainage underneath Taylor Street exiting the project area to the north.

The existing pavement on Foster Street is generally 28 ft wide consisting of two 12 ft wide lanes and 2 ft paved shoulders on each side. Foster Street is classified as an urban collector and has a speed limit of 30 mph. There is currently a single 500 ft length sidewalk spanning from the MBTA station driveway to the Route 2 overpass on the north side of the road. There are no other bicycle or pedestrian facilities along Foster Street in the project limits.

Existing drainage on Foster Street is mostly conveyed by runoff infiltration from the edge of road to the adjacent vegetated areas. Foster Street also has a system of catch basins conveying closed stormwater drainage to open outfalls adjacent to the roadside.

The short section of Grimes Lane in the project area has neither pedestrian accommodations nor catch basins. The width of pavement on Grimes Lane at Foster Street is below current vehicular safety standards for two-way traffic, narrowing to just 10 feet. Grimes Lane is classified as a local road and has a speed limit of 25 mph.

There are two existing culvert crossings beneath Foster Street. The project plans included in Appendix B include a base topographical survey showing an 18 inch corrugated metal pipe Culvert running beneath and transverse to Foster Street at project Station 10+30, adjacent to the parcels of 295 Foster Street and 300 Foster Street. The culvert conveys stormwater drainage from Foster Street and connects an open body of water with an intermittent stream.

There is also a 48 inch Reinforced Concrete Pipe culvert at project station 24+85 conveying an intermittent stream underneath Foster Street located within the State-owned layout of Route 2.

On the frontage of the MBTA station parcel, there is an existing rip-rap swale with catch basins contained in the swale conveying water away from Foster Street and the MBTA parking area.

3.2 Resource Area Delineation

Inland resource areas were delineated in July and August of 2018 by Robin Casioppo, a wetland and soil scientist employed by Fuss & O'Neill, and by Josh Wilson, PWS, also employed by Fuss & O'Neill. The delineations were performed in accordance with methods developed by Massachusetts DEP and with respect to the Wetlands Protection Act. A wetland delineation report has been included in Appendix D.

The delineation found resource areas in the project area including Bank, Land Under Water, Buffer Zone, and Bordering Vegetated Wetland. The attached plans in Appendix B include delineation flags for the resource areas and buffer zone boundaries as part of the topographic survey base mapping underlying the proposed plans.

4 Proposed Conditions

4.1 Project Description

The project proposes the following work in the project area with an overall goal of improving safety for all modes of travel along the Foster Street corridor.

Upgrades to vehicular, pedestrian, and bicycle safety

- A Shared-use path for non-motorized travel use along the north side of Foster Street connecting Balsam Lane to Taylor Street and serving the frontage of the MBTA Commuter Rail Station.
- (4) Rectangular Rapid Flashing Beacons to alert drivers of pedestrian crossings with revised crosswalks for safer visibility and accessibility compliant pedestrian curb ramps.
    - (3) Located on Foster Street
    - (1) Located on Taylor Street
- New 10-foot wide pedestrian and bike sidewalk ramps on Taylor Street at the Foster Street intersection.
- New pavement markings with vehicle warning & regulatory signage for better driver visibility
- Full-depth pavement reconstruction on Foster Street.
- Re-alignment of Grimes Lane at Foster Street to increase safety at the rail crossing and sight distance for all users at the intersection. The improvements will bring the width of Grimes Lane into safety standards for a two-way road.
- Increased LED streetlighting coverage along Foster St.
- Replaced aging guard rail at steep road side embankments.

Drainage Improvements

Because curbing will be added to the road shoulder for all of the west side of Foster Street for the shared-use path and parts of the east side to improve pedestrian safety, the closed drainage system will be upgraded to provide improved treatment.

- (9) Existing catch basins on Foster Street replaced with new deep-sump (4ft) catch basins
- (3) New deep-sump catch basins on Foster Street
- (4) New leaching (impervious) catch basins on Foster Street to convey stormwater runoff into ground infiltration
- (7) Existing catch basins remodeled and repaired
- All other existing catch basins in the project limits remaining are to be cleaned at the completion of construction
- The rip-rap drainage swale on the frontage of MBTA property will be moved less than 5 feet to the north and rebuilt as having the same overall area as existing. The location of the swale is proposed to be shifted to fit the shared-use path.

Maintenance and Repair to Critical Town Infrastructure

- A new 10 inch water service main under Foster Street through the project limits. This asset upgrade seeks to leverage the opening of the road for pavement reconstruction as preventative maintenance and critical infrastructure upgrade.

Pavement Widening

- To implement the shared-use path on Foster Street to MassDOT design standards, overall impervious area widening was necessary. The existing paved cross section of Foster Street is 28 ft wide. The proposed road cross section will narrow the road pavement on Foster Street by 4 ft but will add a 10 ft wide paved shared-use path. This results in a new cross section containing a total of 34 ft in pavement width when the shared-use path is included. This is 6 ft more of total pavement width than the exiting condition on Foster Street.

Impervious Area

- The existing condition has a total of 2.930 acres of impervious area within the public layout work limits. The proposed condition has a total of 3.542 acres within the public layout work limits. The project proposes to create an additional 0.612 acres (26,612 SF) of impervious area within the project limits. The net new impervious area is distributed along the 0.75 mile long Foster Street corridor.

Layout Alteration and Easements

- The project stays within the existing road layout ROW for a large majority of the project. Where grading of slopes exceeds the layout boundaries or a utility pole must be moved to the edge of the layout boundary, layout alterations and easements are being proposed as part of the project. The temporary and permanent easements are shown on the plans in Appendix B.

Tree and Shrub Plantings

- Tree plantings are proposed at two locations. Five native species including red maple trees, Acer Rubrum, are proposed to be planted at the frontage of 305 Foster Street. The maple trees will replace a stand of 1 Pine and 2 Hawthorne on private property that must be removed for utility pole relocation. The ornamental shrub 'Mountain Fire Andromeda' is proposed to be planted at the frontage of 284 Foster Street in the public right of way where a slope is being cut back close to the boundary of a private lawn. The purpose of the shrub plantings is for visual screening.

4.2 Alternatives Analysis

The design was initiated in the Fall of 2017 and followed the multi-stage MassDOT project design and development process. The design process evaluated different alternatives for impacts and sought public and stakeholder involvement.

The preferred alternative for the design of Foster Street minimized impacts compared to a second viable alternative by reducing the width of pavement and providing a vegetated buffer between the path and road. Concept 2 below was not selected to continue past 25% design in part because Concept 1 achieved the same mobility and safety goals with a narrower width of pavement by 1ft.

Figure 1: An Early Concept Alternative for Foster Street that was Not Selected
Total Pavement Width is 35ft

Figure 2: The Preferred Alternative for Foster Street
Total Pavement Width is 34ft with a Vegetated Buffer Between Path and Edge of Road

The two concepts above were presented to the Littleton Board of Selectmen and community members at the Town Select Board meeting on January 14, 2019. Community members present at the meeting, including some who live on Foster Street, overwhelmingly favored the shared-use path concept. Those

in favor of the shared-use path believed it would not only benefit adjacent business office parks, but also local residents who would use it for recreational purposes. They preferred the proposed buffer separating vehicular traffic and pedestrians and cyclists. The majority of the Board members present at the meeting supported Concept 2 which included the shared-use path, as they appreciate the increased pedestrian and cyclist safety, as well as the decreased vehicular speeds expected as a result of the proposed road narrowing. With the support of its constituents, the Board passed a motion endorsing Concept 2.

The project design team presented at the Littleton Station Area Visioning Study Community Meeting listening session at Littleton Middle School on April 5, 2019 and the follow-up community visioning session on April 6, 2019. The event was hosted by The Town of Littleton Planning Department.

A required 25% design submission public hearing was hosted by MassDOT. The meeting took place virtually on May 28, 2020. MassDOT recorded the meeting and held an extended mail-in public comment period. The preferred alternative was selected after the conclusion of the design public hearing process.

After the design public hearing comment period, the design continued to be refined as MassDOT performed design reviews at 75% and 100% design stages.

4.3 Erosion and Sedimentation Control

The proposed project will enact erosion and sediment control during construction using the following methods.

- **Sediment Control Barriers**

Staked compost filter tubes or equivalent are proposed for sediment control barriers. The placement of sedimentation control barriers for the Project are shown on the Construction Plans section of the proposed project plans in Appendix B. The construction details section of the proposed plans includes a typical example of a compost filter tube installation. Silt fence is included as incidental to the item when required at sensitive resource areas.

- **SWPPP**

Sedimentation control for the proposed project will be implemented through the National Pollutant Discharge Elimination System (NDPES) required Storm Water Pollution and Protection Plan (SWPPP) which must be prepared by the contractor prior to the commencement of construction. The Plan will include the General Permit conditions and detailed descriptions of erosion and sedimentation controls to be implemented during construction. The SWPPP plan requires weekly inspection and monthly reporting of the condition of erosion controls. The Town will be included on the distribution list of the inspection forms and reports.

- **Silt Sacks**

Silt sacks shall be installed in retained existing catch basins and drop inlets within the project limits and as required by the MassDOT Resident Engineer to prevent sediment from entering existing catch basins during construction. The Contractor shall inspect the condition of silt sacks after each rainstorm and

during major rain events. Silt sacks shall be cleaned periodically to remove and dispose of accumulated debris as required. Silt sacks, which become damaged during construction operations, shall be repaired or replaced immediately at no additional cost to the Department. When emptying the silt sack, the contractor shall take all due care to prevent sediment from entering the structure. Any silt or other debris found in the drainage system at the end of construction shall be removed at the Contractors expense. The silt and sediment from the silt sack shall be legally disposed of offsite. Under no condition shall silt and sediment from the insert be deposited on site and used in construction.

4.4 Sequence of Construction Activities

The Project is proposed to be constructed in a single phase under the control and oversight of MassDOT who will provide on-site construction administrative and inspection services during the entire construction duration.

Although the contractor will have the ability to propose adjusting the sequence of work to optimize scheduling and efficiency, or may perform work simultaneously, a general sequence of construction is as follows:

- Creation of a Storm Water Pollution and Prevention Plan (SWPPP)
- Erosion and sedimentation control installation
- Establishment of contractor access and laydown areas outside of resource areas
- Work zone safety signage establishment including rail crossing location and temporary traffic guidance
- Removal of vegetation within the limit of work as needed for access
- Work on underground utilities including water main installation and storm drainage
- Work on overhead utilities
- Testing of new water main
- Excavation and grading to establish new sub-base of shared-use path and road
- Installation of curbing, sidewalk ramps, guardrail, fencing and new permanent traffic safety signage
- Full-depth paving of shared use path and road
- Establish plantings and loam/seed
- Installation of pavement markings
- Restoration of temporary work areas and removal of temp signage
- Removal of erosion and sedimentation controls

5 310 CMR 10.00 WPA Regulations Review

This section describes how the project conforms to the relevant provisions of 310 CMR 10.00, the Wetland Protection Act, enumerates the proposed project impacts to resource areas, and describes how the project meets performance standards under the Act.

5.1 Limited Project Status

Under 310 CMR 10.53, projects may be eligible as a limited project:

> "Notwithstanding the provisions of 310 CMR 10.54 through 10.58 and 10.60, the Issuing Authority may issue an Order of Conditions and impose such conditions as will contribute to the interests identified in M.G.L. c. 131, § 40 permitting the following limited projects (although no such project may be permitted which will have any adverse effect on specified habitat sites of Rare Species, as identified by procedures established under 310 CMR 10.59). In determining whether to exercise its discretion to approve the limited projects listed in 310 CMR 10.53(3), the Issuing Authority shall consider the following factors: the magnitude of the alteration and the significance of the project site to the interests identified in M.G.L. c. 131, § 40, the availability of reasonable alternatives to the proposed activity, the extent to which adverse impacts are minimized, and the extent to which mitigation measures, including replication or restoration, are provided to contribute to the protection of the interests identified in M.G.L. c. 131, § 40."

The project is eligible as a limited project under 310 CMR 10.53(3)(f) which stipulates that:

> "Maintenance and improvement of existing public roadways, but limited to widening less than a single lane, adding shoulders, correcting substandard intersections, and improving inadequate drainage systems."

The proposed widening of paved surface in the Foster Street Corridor is 6ft wide. This is less than the width of a single traffic lane, which has a typical minimum of 10ft wide. The widening on Foster Street is not providing an additional lane for motorized vehicle travel, but instead a non-motorized shared-use path.

5.2 Bank (310 CMR 10.54)

Bank was delineated in the project area as shown on the plans in Appendix B. Bank flags are found in the project area at the following locations:

- On the property of 300 Foster Street. Between project stations 9+00 and 10+75 on the east side of Foster Street. The flag series in the plans is A100-A116. There is an open freshwater body adjacent to a culvert located beneath Foster Street.

- On MassDOT property, between project stations 24+75 and 25+00, there is an intermittent stream flowing from a culvert underneath Foster Street. The flag series in the plans is F600-F602 (R&L) on the west side of Foster Street. On the east side of Foster Street the flag series are H800-803 and I900-901.

No temporary or permanent impacts to Bank are proposed by the project.

5.3 Bordering Vegetative Wetland (310 CMR 10.55)

BVW was delineated in the project area as shown on the plans in Appendix B. BVW flags are found in the project area at the following locations:

- On the east side of Foster Street at the property of 260 Foster Street. Between project stations 30+50 and 33+00. Flag series K200-K220.
- On the east side of Foster Street and adjacent to Grimes at the property of 260 Foster Street. Between project stations 26+50 and 30+25. Flag series L300-L326.
- On the west side of Foster Street at the property of 295 Foster Street. Between project stations 9+00 and 10+50. Flag series B200-B205.
- On the west side of Foster Street at the property of 295 Foster Street. Between project stations 10+40 and 10+45. Flag series C300-C309.
- On the west side of Foster Street at the property of 295 Foster Street. Between project stations 12+00 and 17+00. Flag series D400-D405.
- On the east side of Foster Street at the properties of 300 and 290 Foster Street. Between project stations 13+50 and 14+50. Flag series E500-E503.
- On the east side of Foster Street at the property of the Mass. Dept of Transportation. Between project stations 24+75 and 25+00. Flag series J100-104.

No temporary or permanent impacts to BVW are proposed by the project.

5.4 Land Under Water (310 CMR 10.56)

LUW is found in the project area at the locations described under Bank.
No temporary or permanent impacts to LUW are proposed by the project.

5.5 Land Subject to Flooding (310 CMR 10.57)

The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) does not depict areas of potential flooding in the project limits. Bordering Land Subject to Flooding (BLSF) is not mapped as overlapping at the project site. BLSF is defined in 310 CMR 10.57 (2)(a)(1) as "an area with low, flat topography adjacent to and inundated by flood waters rising from creeks, rivers, streams, ponds or lakes. It extends from the banks of these waterways and water bodies; where a bordering vegetated wetland occurs, it extends from said wetlands." No temporary or permanent impacts to BLSF

or ILSF are proposed by the project. The FEMA FIRM map panels for the project are provided in Appendix A.

5.6 Riverfront Area (310 CMR 10.58)

There is no Riverfront Area within the project limits. No temporary or permanent impacts to Riverfront Area are proposed by the project.

5.7 100-ft Buffer Zone (310 CMR 10.02(2)(b))

The project work limit area contains a total of 116,466 SF (2.67 AC) of 100-ft Buffer Zone measured from BVW and Bank. The existing impervious area within the 100-ft Buffer Zone is 50,517 SF (1.16 AC).

Permanent impacts are calculated as the area of new impervious surface from the shared use path or realignment of the road. Temporary impacts for the project are areas to be disturbed by construction activities, but ultimately returned to a vegetated cover with loam & seed. Table 1 summarizes the existing and proposed impacts to the 100-ft Buffer Zone.

Table 1: Buffer Zone Impacts

100-FT Buffer from BVW or Bank			
Description	**Area** (SF/ AC)	**Perm./Temp.**	**Cause/Descrip. Of Impacts**
Total Zone Area in Project Limit	116,466/ 2.67	-	-
Existing Impervious	50,517/ 1.16	Perm.	Road surface, Sidewalk
Net Change in Impervious	15,768/ 0.36	Perm.	Road surface, Shared-use path
Proposed Impervious	66,285/ 1.52	Perm.	Road surface, Shared-use path
Temp. Impacts	35,344/ 0.81	Temp.	Earthwork, grading, grubbing. To be restored with loam & seed

The net increase of proposed permanent impact to 100-ft Buffer Zone is 15,768 SF or 0.36 AC within the 5.37 AC and 0.81-mile-long project area.

The general provisions of 310 CMR 10.53 states that:

> "The Issuing Authority may consider the characteristics of the Buffer Zone, such as the presence of steep slopes, that may increase the potential for adverse impacts on Resource Areas. Conditions may include limitations on the scope and location of work in the Buffer Zone as necessary to avoid alteration of Resource Areas. The Issuing Authority may require erosion and

> sedimentation controls during construction, a clear limit of work, and the preservation of natural vegetation adjacent to the Resource Area and/or other measures commensurate with the scope and location of the work within the Buffer Zone to protect the interests of M.G.L. c. 131, § 40. Where a Buffer Zone has already been developed, the Issuing Authority may consider the extent of existing development in its review of subsequent proposed work and, where prior development is extensive, may consider measures such as the restoration of natural vegetation adjacent to a Resource Area to protect the interest of M.G.L. c. 131, § 40."

As a linear transportation project in an existing corridor, the project was not able to avoid the Buffer Zone. The design alternatives analysis, described in Section 4.2, did select a preferred alternative that is 1ft narrower in total pavement width than the next alternate design. The impacted Buffer Zone is a previously developed road corridor. The project proposes an erosion and sediment control plan as described in Section 4.3 and shown on the plans. The project also proposes to revegetate the temporary impact areas within the Buffer Zone with loam & seed.

6 Stormwater Report

The project is located in the Merrimack Watershed. The receiving waters for the project include Beaver Brook, a category 3 impaired waterway for bacteria/pathogens. Also Mill Pond, a freshwater lake and a category 5 impaired waterway for not supporting aesthetic, primary contact, or secondary contact due to macrophytes.

The project is eligible as a redevelopment and a limited project under the Wetlands Protection Act. The following is a description of how the proposed project meets the stormwater standards to the maximum extent practicable in accordance with the Massachusetts Stormwater Handbook.

The project will result in a net increase of an additional 0.612 acres of impervious area within the project limits distributed along the 0.75 mile long linear Foster Street corridor. Upgrades to the storm water system are proposed to the maximum extent practicable.

Standard 1: No new stormwater conveyances (e.g. outfalls) may discharge untreated stormwater directly to or cause erosion in wetlands or waters of the Commonwealth

No new stormwater point source discharges to the resource areas are proposed as part of the redevelopment project. Two existing discharge points will be improved upon with new flared ends and rip rap protection. All other existing discharge points will remain as is. Installation of rip rap protection at refurbished outfalls will provide erosion protection, which is an improvement to the existing condition. The project complies with Standard 1.

Standard 2: Peak Rate Attenuation

Attenuation improvement has been proposed to the maximum extent practical. The project proposes improved attenuation through:

- 4 new leaching catch basins with 3 feet of sump depth
- 9 existing non-deep sump catch basins on Foster Street to be replaced with deep sump catch basins. A deep-sump catch basin has 4 feet of sump depth compare to 2-3ft for a non-deep sump catch basin
- 3 new deep sump catch basin locations are proposed on Foster Street
- 7 existing catch basins will be remodeled and repaired
- All other remaining catch basins will be cleaned of debris and sediment there by restoring original sump capacity

No new detention areas for attenuation are proposed outside of the width of road as this is a linear transportation project corridor where impacts to adjacent property and trees have been intentionally minimized. The project is a redevelopment and meets the Stormwater Standard 2 to the maximum extent practicable.

Standard 3: Stormwater Recharge
Recharge has been proposed to the maximum extent practicable. In the existing condition, recharge is provided by a combination of sheet flow to the road shoulder where infiltration occurs and by discharge where the closed drainage system outfalls. The proposed condition will also provide recharge by a combination infiltration by sheetflow at the edges of the shared-use path and outfall at existing discharge points. Improvements to recharge are provided by:

- Four new leaching catch basins on Foster Street will convey stormwater runoff to ground infiltration
- A riprap swale at the frontage of the MBTA Station will be repaired and rebuilt 5 feet offset from the existing location to accommodate the proposed shared-use path

No new infiltration areas are proposed outside road and shared-use path as this is a linear transportation corridor where impacts to adjacent property and trees have been intentionally minimized. The project is a redevelopment project and meets the Stormwater Standard 3 to the maximum extent practicable.

Standard 4: Water Quality
Water quality will be maintained and improved by the following:

- 4 new leaching catch basins
- 9 existing non-deep sump catch basins on Foster Street to be replaced with deep sump catch basins. A deep-sump catch basin has 4 feet of sump depth compare to 2-3ft for a non-deep sump catch basin
- 3 new deep sump catch basin locations are proposed on Foster Street
- 7 existing catch basins will be remodeled and repaired
- All other remaining catch basins will be cleaned of debris and sediment there by restoring original sump capacity

The proposed post-construction operation and maintenance of the closed drainage sturcutres will maintain the treatment capability of the system. A suggested Long-term Operation and Maintenance Plan, including required maintenance activities and schedule of maintenance requirements is included in Appendix G. This is a redevelopment project and meets Stormwater Standard 4 to the maximum extent practicable. A TSS removal spread sheet for deep sump catch basins can be found in Appendix H. The deep sump catch basins will provide 25% TSS removal. The leaching catch basins will provide 25% TSS removal as they will be offline and not connected to a deep sum catch basin.

Standard #5: Land Uses with Higher Potential Pollutant Loads
Standard 5 does not apply to the project. The project does not contain any area of higher pollutant loads as defined by the Massachusetts Stormwater Handbook.

Standard #6: Critical Areas
Standard 6 does not apply to the project. This project does not contain any critical areas as defined by the Massachusetts Stormwater Handbook.

Standard #7: Redevelopment
This project is a redevelopment project. Standards 2, 3, and 4 are met to the maximum extent practicable. Standards 1, 8, 9, and 10 are met fully.

Standard #8: Construction Period Controls
It is anticipated that there will be no pollution created during the development of the site. Erosion and sedimentation controls will be implemented and maintained during construction until construction is complete and disturbed areas have been stabilized. This will be done in accordance with local, state, and federal requirements. Details of the erosion and sedimentation control measures are shown on the Site Plans located in Appendix B. The contractor will be responsible to ensure the correct implementation of the erosion and sedimentation controls. MassDOT will provide continuous on-site construction inspection to ensure contractor compliance with erosion and sedimentation controls.

The extent and schedule for the commencement of construction activities, grading, and soil stabilization measures will be recorded and maintained as part of the Stormwater Pollution Prevention Plan (SWPPP). The SWPPP will be completed and provided by the contractor prior to the start of construction in accordance with the EPA NPDES General Permit for Discharge from Construction activities.

Standard #9: Operation and Maintenance Plan
A Construction Operation and Maintenance (O&M) Plan has been developed for the redevelopment of the site and is included in Appendix G. The contractor and Town of Littleton shall be responsible for the construction operation and maintenance of the site.

A suggested Long-term Operation and Maintenance Plan, including required maintenance activities and schedule of maintenance requirements is included in Appendix G. The Town of Littleton will be responsible for post construction operation and maintenance of the site.

Standard #10: Illicit Discharge to Drainage System
This project does not contain illicit discharges to Stormwater Management Systems as defined in the Massachusetts Stormwater Handbook. A copy of the Illicit Impact Statement can be found in Appendix I.

7 Town of Littleton Wetland Protection Regulation Review

The performance standards of the Town of Littleton Wetland Protection Regulations are described in this section.

7.1 The 50-ft No-Disturbance Zone

The Town of Littleton observes a 50-ft No-Disturbance Zone where:

> "No activities or work is permitted other than passive (foot or non-motorized vehicle) passage and removal of invasive vegetation if done in compliance with these Regulations. Except as noted, no vegetation may be disturbed, and the area should remain unchanged from its pre-project state."

The project work limit area contains a total of 45,253 SF (1.04 AC) of 50-ft No-Disturbance Zone measured from BVW or Bank. Existing impervious area within the 50-ft No-Disturb Zone totals 14,655 SF (0.34 AC). The construction of the shared-use path and shifting of the existing road alignment in some locations will result in an additional 7,499 SF (0.17 AC) of impervious area within the 50-ft-No-Disturbance Zone.

Permanent impacts are calculated as the area of new impervious surface. Temporary impacts are areas that will be disturbed by construction activities such as earthwork and then returned to a vegetated cover with loam & seed. Table 2 summarizes the impacts to the 50-ft No Disturb Zone.

Table 2: 50-ft No Disturbance Zone Impacts

50-FT No Disturb Zone from BVW or Bank			
Description	**Area** (SF/ AC)	**Perm./Temp.**	**Cause/Descrip. Of Impacts**
Total Zone Area in Project Limit	45,253 / 1.04	-	-
Existing Impervious	14,655 / 0.34	Perm.	Road surface, Sidewalk
Net Change in Impervious	7,499 / 0.17	Perm.	Road surface, Shared-use path
Proposed Impervious	22,154 / 0.50	Perm.	Road surface, Shared-use path
Temp. Impacts	14,355 / 0.33	Temp.	Earthwork, grading, grubbing. To be restored with loam & seed

Only projects meeting the eligibility for a waiver under Section 1.4 of the Town Regulations may be exempt. See Section 8.4 for more information on the project's eligibility for a waiver.

7.2 Performance Standards in the 100-ft Buffer Zone

The Town performance standards for work in the 100-Ft Buffer Zone (Section 4.3 of the Littleton Wetland Bylaw Regulations) state that:

> 'The activity shall not significantly impair the values and functions of the adjacent Areas Subject to Protection. The quantity and quality of resource values and functions, as well as pre-project conditions, such as ground slope, soil conditions, vegetation, and prior disturbance of the site should be considered explicitly in making this determination. Any offsetting mitigation provided shall also be considered, including the inclusion of pedestrian and bicycle access rights-of-way in the project (which can reduce the pollutant runoff and climate change contribution associated with the project)."

The project proposes pedestrian and bicycle access on Foster Street in a safe, dedicated and separate facility. The project is a potentially important step toward a larger more complete network of bicycle and pedestrian access for the Town of Littleton and the MBTA commuter rail station. The shared-use path will contribute to the reduction in vehicular trips and emissions as a non-motorized link to commuter rail service and as a new recreational trail for local residents

7.3 Other Resource Areas

•The project limits are not within an area of NHESP Estimated Habitats of Rare Wildlife or NHESP Priority Habitats of Rare Species.
•There are no state certified vernal pools within the project limits.
•The project is not within an Area of Critical Environmental Concern.
•The project does not discharge or drain to a waterbody designated as an Outstanding Resource Water. The nearest ORW is Nagog Pond in Acton located 5.4 miles east of the project area.

Attached Figure 2 shows the most recent NHESP Habitats map of the project area as accessed from MassMapper showing data from the most recent NHESP Atlas.

7.4 Eligibility for Waiver

Section 1.4(2) of the Town Regulation states that:

> "The Commission may also waive the provisions of Sections 4.2, 4.3, and/or 4.5, to permit any of the limited projects listed in 310 CMR 10.53(3)(a) through (t). In determining whether to exercise its discretion to approve a limited project, the Commission shall consider the following factors: the magnitude of the alteration, the significance of the project site to the

Interests Protected by the Bylaw, the availability of reasonable alternatives to the proposed activity, the extent to which adverse impacts are minimized, and the extent to which mitigation measures are provided to contribute to the protection of the Interests Protected by the Bylaw"

The magnitude of the alteration proposed by the project is small when compared to the overall project limits. The overall project limit totals 5.37 acres. The project area permanently impacting the 50-ft No-Disturb Zone is 0.16 acres, comprising a share of 3% of the total project area.

The significance of the project site to the interests protected by the Bylaw may be considered in context of roadside vegetation. The vegetated shoulders of Foster Street within the 50-ft No Disturb Zone have been in close proximity to the road and vehicular traffic with associated roadside mowing and stormwater runoff for many years. The project area does not contain NHESP priority or estimated habitats or vernal pools (see Figure 2 attached).

The availability of reasonable alternatives was evaluated as discussed in the Alternatives Analysis Section 5.2. The preferred alternative did reduce permanent impacts to the 50-ft- No-Disturb Zone by selecting a cross section with 1ft less of total new pavement width compared to an alternate design.

Impacts are proposed to be minimized via the sedimentation and erosion control measures proposed. All temporary impact areas will receive loam & seed to restore ground cover vegetation. A mitigating factor will be the creation of a new facility for non-motorized travel. The shared-use path may contribute to the reduction in vehicular trips and emissions as a link to commuter rail service and as a new recreational trail for local residents.

In summary, the applicant respectfully requests that the Littleton Conservation Commission find these measures adequately protective of the interests identified in the Town Bylaw and issue a waiver to the work described in this NOI and on the attached plans.

8 Conclusion

In Summary, the project proposes a new 10 foot wide separated shared-use path on Foster St while the road surface on Foster St will be narrowed by 4 feet. An unsafe intersection at Grimes Lane and Foster Street is proposed to be realigned. The project addresses vehicular, pedestrian, and bicycle safety. The project proposes an improved stormwater drainage system to the maximum extent practical including four new leaching catch basins and upgrades to some existing catch basins as described in Section 4. The project will also include the replacement of a 10 inch water main underneath Foster Street in an effort to 'dig once' and reduce sediment disturbance in the corridor.

Because the project area is an existing roadway and the project will not widen the road by the width of one lane, under 310 CMR, the project is eligible as a redevelopment project for stormwater management and also eligible as a limited project under 10.53(3)(f). The project proposes permanent and temporary impacts to 100-ft Buffer Zone and the Town of Littleton 50-ft No Disturbance Zone. All temporary impact areas will be revegetated with loam and grass seed. No other resource areas are proposed to be impacted. The applicant is requesting a Waiver from the Commission under the relevant provisions of Section 1.4(2) of the Town of Littleton Wetland Protection Regulations.

The applicant respectfully requests that the Littleton Conservation Commission find these measures adequately protective of the interests identified in the WPA and the Town Bylaw as presented in this NOI.

FEMA FIRM MAPS

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) Report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS Report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study Report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study Report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Massachusetts State Plane Mainland Zone (FIPS zone 2001). The **horizontal datum** was NAD 83, GRS 1980 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713- 3242**, or visit its website at http://www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from orthophotography provided by MassGIS at a scale of 1:500 from photography dated April 2008.

The **profile baselines** depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the **profile baseline**, in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.

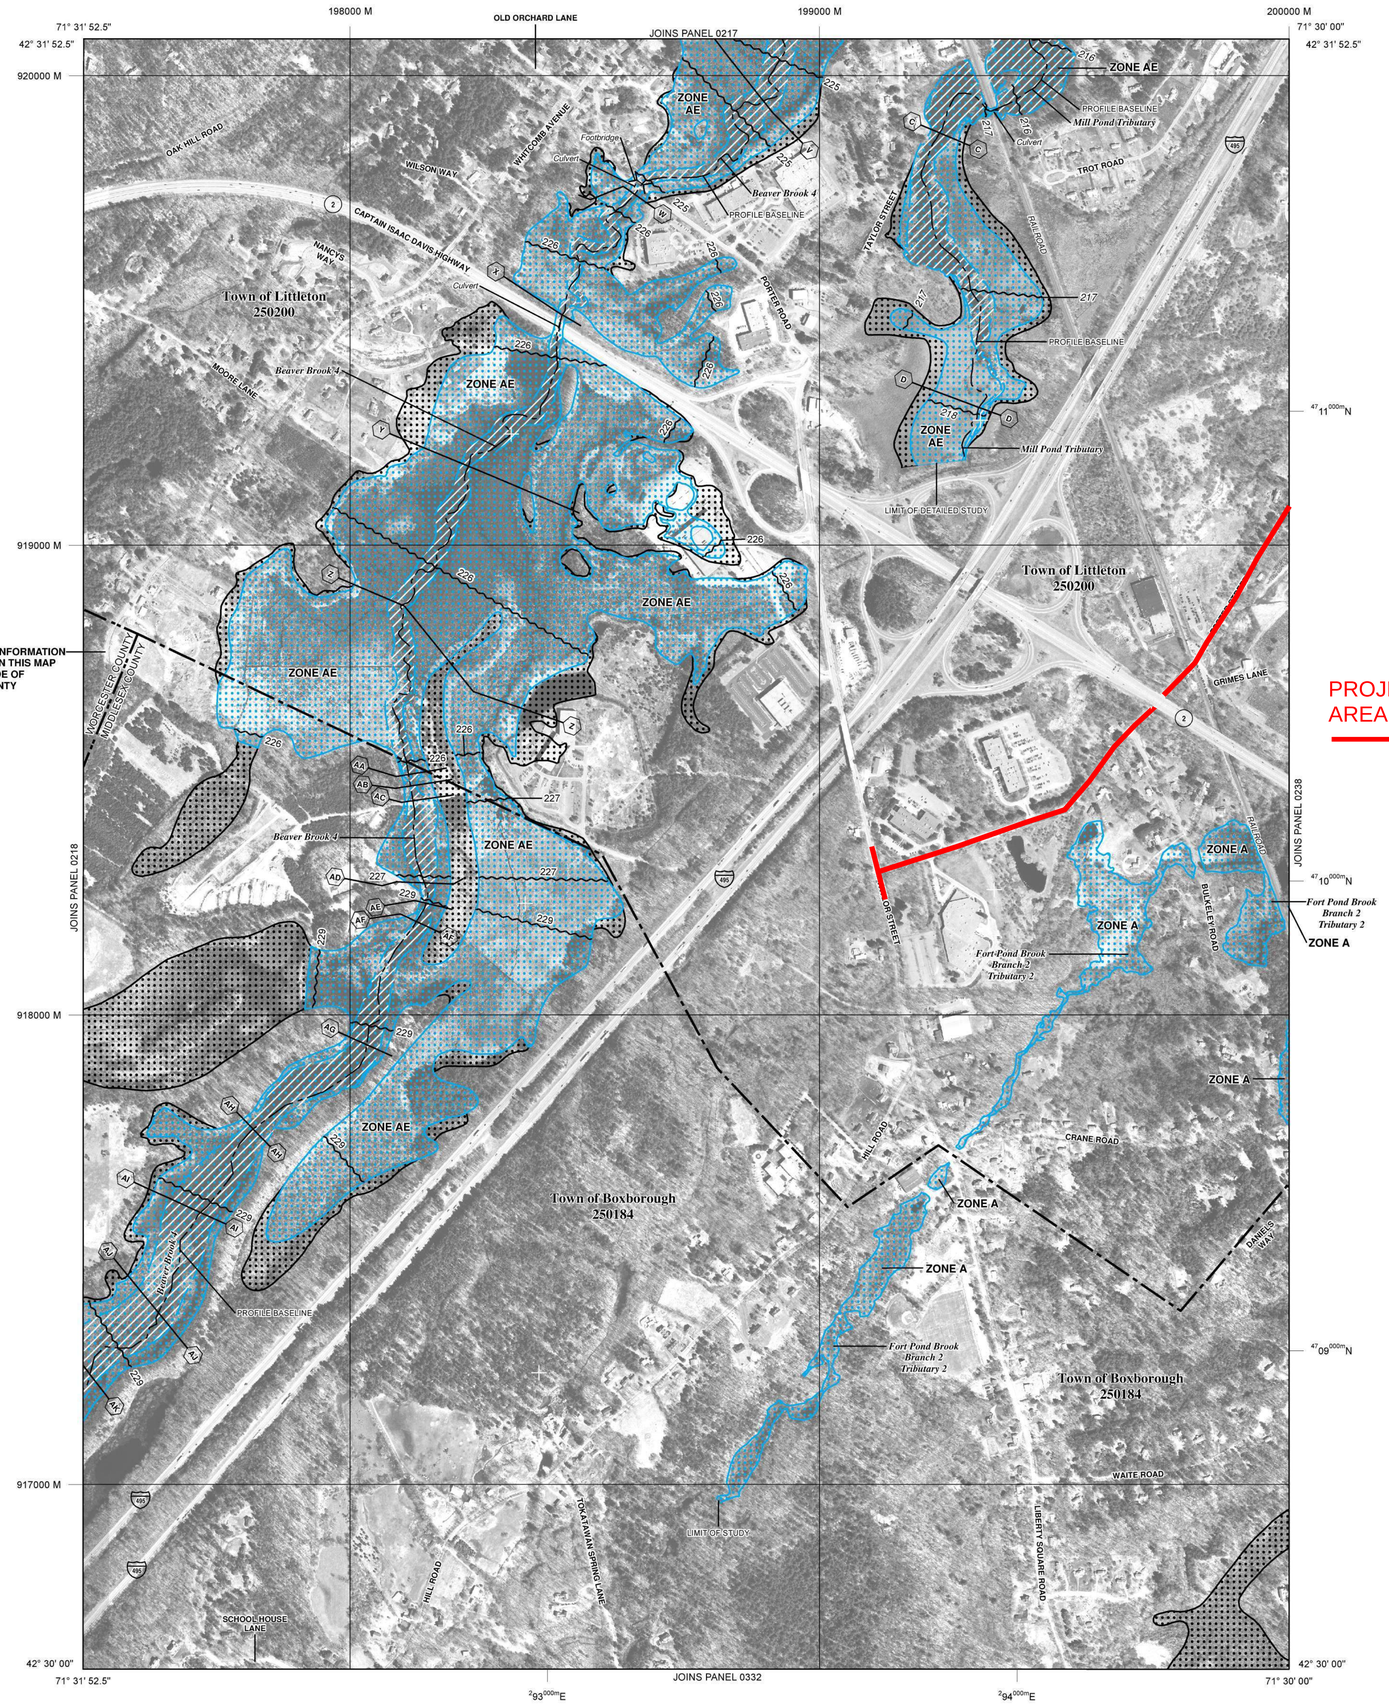
This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables for multiple streams in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

For information on available products associated with this FIRM visit the **Map Service Center (MSC)** website at http://msc.fema.gov. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. Many of these products can be ordered or obtained directly from the MSC website.

If you have **questions about this map,** how to order products, or the National Flood Insurance Program in general, please call the **FEMA Map Information eXchange (FMIX)** at **1-877-FEMA-MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.



LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A	No Base Flood Elevations determined.
ZONE AE	Base Flood Elevations determined.
ZONE AH	Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO	Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR	Special Flood Hazard Areas formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99	Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V	Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE	Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X	Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X	Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D	Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

LEGEND & GENERAL NOTES

GENERAL NOTES:

1. INFORMATION REGARDING THE LOCATION OF EXISTING UTILITIES HAS BEEN BASED UPON AVAILABLE INFORMATION AND MAY BE INCOMPLETE, AND WHERE SHOWN SHOULD BE CONSIDERED APPROXIMATE. NO GUARANTEE TO THE ACCURACY OF THE EXISTING UTILITIES FACILITIES SHOWN IN THIS PROJECT IS EXPRESSED OR IMPLIED UNLESS OTHERWISE NOTED. CONTRACTOR SHALL CONTACT "Mass DIG-SAFE", 1-888-344-7233. CONTRACTOR SHALL MAINTAIN MARKINGS WHERE NEEDED DURING PROJECT. ALL UTILITY LOCATIONS THAT DO NOT MATCH THE VERTICAL OR HORIZONTAL CONTROL SHOWN ON THE PLANS SHALL IMMEDIATELY BE BROUGHT TO THE ATTENTION OF THE ENGINEER FOR RESOLUTION. THE CONTRACTOR SHALL VERIFY LOCATIONS OF UTILITIES AND SERVICE LATERALS PRIOR TO CONSTRUCTION. ANY CONFLICTS WITH LOCATIONS OF LIGHT POLES, TREES, ETC. SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER FOR RESOLUTION PRIOR TO CONSTRUCTION.
2. VERIZON UNDERGROUND TELEPHONE: THE PROPOSED UNDERGROUND TELEPHONE RELOCATIONS AS SHOWN ASSUMES INSUFFICIENT COVER DUE TO PROPOSED ROADWAY WORK. ACTUAL LIMITS OF PROPOSED UNDERGROUND TELEPHONE RELOCATIONS WILL BE DETERMINED IN THE FIELD BY TEST PITS. IF COVER CAN NOT BE ACHIEVED VERIZON PREFERS TO LOWER THE LINES IN PLACE.
3. THE CONTRACTOR IS RESPONSIBLE FOR OBTAINING ALL NECESSARY LOCAL AND STATE APPROVALS AND PERMITS PRIOR TO THE START OF CONSTRUCTION. THE CONTRACTOR SHALL CONFORM TO ALL REQUIREMENTS OF THE LOCAL AND STATE AGENCIES. THE CONTRACTOR SHALL OBTAIN AND PAY FOR ALL PERMITS AND FEES REQUIRED FOR THIS WORK INCLUDING BUT NOT LIMITED TO TOWN SIDEWALK AND EXCAVATION PERMITS AND ASSOCIATED BONDING.
4. THE CONTRACTOR SHALL PROTECT EXISTING UTILITIES AND STRUCTURES. THOSE OF WHICH HAVE BEEN DAMAGED SHALL BE PROMPTLY REPAIRED TO EXISTING OR BETTER CONDITION AT THE CONTRACTOR'S EXPENSE.
5. THE ROADWAY IS TO BE GRADED SMOOTHLY AND EVENLY IN ACCORDANCE WITH THE GRADING AND TIE PLANS, PROFILE, AND CROSS SECTIONS. THE CONTRACTOR IS RESPONSIBLE FOR INSURING A POSITIVE DRAINAGE FLOW TO ALL CATCH BASINS WITHOUT CREATING ANY FLAT SPOTS THAT WILL RESULT IN STANDING WATER.
6. THE CONTRACTOR SHALL COORDINATE WITH PROPERTY OWNERS TO REMOVE ANY PERSONAL ITEMS, PRIVATE SPRINKLER LINES/SYSTEMS, LANDSCAPING, PLANT BULBS, PAVERS LOCATED IN THE TEMPORARY EASEMENT, TOWN LAYOUT, AND MassDOT LAYOUT.
7. ANY PUBLIC OR PRIVATE PROPERTY DISTURBED AS A RESULT OF CONSTRUCTION OPERATIONS SHALL BE RESTORED AS QUICKLY AS POSSIBLE AND TO THE SATISFACTION OF THE ENGINEER.
8. RIM OR FRAME ELEVATIONS OF ALL UTILITY STRUCTURES SHALL BE ADJUSTED TO MEET FINISHED PAVED SURFACES. PRIVATE UTILITIES WHO ARE RESPONSIBLE FOR ADJUSTING THEIR OWN STRUCTURES SHALL BE NOTIFIED AT LEAST 2 WEEKS IN ADVANCE BY THE CONTRACTOR.
9. STAGING AREAS AND MATERIAL STOCK PILES SHALL BE LIMITED WITHIN THE SITE AND LOCATED SO AS NOT TO INTERFERE WITH PEDESTRIAN OR VEHICULAR TRAFFIC UNLESS APPROVED OTHERWISE BY THE MassDOT AND THE TOWN. THE CONTRACTOR SHALL PROVIDE SAFETY DEVICES (IF ORDERED BY THE ENGINEER) TO PROTECT STOCK PILES/WORK STAGING AREAS. IF THIS WORK IS SO ORDERED THERE WILL BE NO ADDITIONAL COMPENSATION MADE TO THE CONTRACTOR.
10. HOURS OF WORK SHALL BE DEFINED IN THE CONTRACT DOCUMENTS. THE MassDOT RESERVES THE RIGHT TO ADJUST THESE HOURS IN THE INTEREST OF PUBLIC SAFETY.
11. ACCESS TO PRIVATE PROPERTIES MUST BE MAINTAINED AT ALL TIMES. FOR SECURITY REASONS ALL PRIVATELY OWNED FENCING THAT IS TO BE REMOVED SHALL BE REPLACED WITHIN 72 HOURS OF REMOVAL.
12. INSTALL SEDIMENTATION AND EROSION CONTROL MEASURES PRIOR TO START OF CONSTRUCTION. EXISTING AND PROPOSED CATCH BASINS DOWNGRADE OF ALL WORK AREAS SHALL BE SURROUNDED BY EROSION CONTROL MEASURES DURING CONSTRUCTION.

THIS PLAN IS BASED ON FIELD SURVEY CONDUCTED BY:
SHERMAN & FRYDRYK, LLC.
FIELD DATA WAS COLLECTED BETWEEN 8/14/18 & 9/17/18

HORIZONTAL CONTROL IS BASED ON VALUES PROVIDED BY MEANS OF GLOBAL POSITION SYSTEM METHODS, AND IS BASED ON THE NORTH AMERICAN DATUM OF 1983 (NAD-1093) MASSACHUSETTS STATE PLANE COORDINATE SYSTEM MAINLAND ZONE. OR PER SURVEY NOTE: HORIZONTAL DATUM IS BASED ON THE 1983 N.A.D. SYSTEM USING SURVEY GPS CONTROL POINTS SET BY THE CITY OF LITTLETON ENGINEERING DEPARTMENT. GPS CONTROL STATION CORS_IS-HAMP, PID-DE9093

VERTICAL CONTROL IS BASED ON THE NORTH AMERICAN VERTICAL DATUM OF 1988, (NAVD-1988). OR VERTICAL DATUM IS BASED ON THE 1988 N.G.V.D. SYSTEM USING SURVEY GPS CONTROL POINTS SET BY THE CITY OF LITTLETON ENGINEERING DEPARTMENT, GPS CONTROL STATION: CORS_ID-HAMP, PID-DE8093

NOTES:

1. ALL EXISTING SIGNS TO REMAIN UNLESS OTHERWISE NOTED ON PLANS
2. ALL PROPOSED PAVEMENT MARKING LINES ON ROADWAYS SHALL BE WET REFLECTORIZED RECESSED THERMOPLASTIC. ALL MARKINGS SHALL BE 6" WIDE, EXCEPT STOP BARS WHICH SHALL BE 12" WIDE.
3. ALL PROPOSED PAVEMENT MARKING LINES ON SHARED-USE PATH SHALL BE PAINTED. ALL MARKINGS SHALL BE 4" WIDE, EXCEPT STOP BARS WHICH SHALL BE 12" WIDE.
4. ANY SIGN LABELED WITH AN " * " SHALL BE MOUNTED ON A SIGN SUPPORT FOR SHARED-USE PATH. THE SUPPORTS SHALL BE 4"x4" PRESSURE TREATED WOOD POSTS AND PLACED AS SHOWN ON THE "TYPICAL SIGN PLACEMENT DETAIL" IN THE CONSTRUCTION DETAILS.
5. ANY OTHER SIGN SHALL BE MOUNTED ON A STANDARD P-5 POST FACTORY COATED GLOSS BLACK AT STANDARD MUTCD HEIGHT UNLESS OTHERWISE SHOWN ON PLANS.
6. ALL R7 SERIES SIGNS (NO PARKING) SHALL BE INSTALLED AT 45 DEGREE ANGLE RELATIVE TO THE ROADWAY. REFER TO THE SIGN SYMBOLS PLACED ON PLANS
7. SEE SIGN SUMMARY ON SHEET 49 FOR SIGN DETAILS

GENERAL NOTES:

1. IF EXISTING PIPES SHOWN TO BE REMOVED ARE WITHIN THE LIMITS OF NEW PIPE TRENCH EXCAVATION, THEN THE REMOVAL COST OF THE OLD PIPES SHALL BE INCLUDED IN THE UNIT COST FOR THE NEW PIPE THAT IS BEING INSTALLED. IF PIPES SHOWN TO BE REMOVED ARE OUTSIDE THE LIMITS OF NEW PIPE TRENCH (AS DETERMINED BY THE ENGINEER), THEN REMOVAL COST SHALL BE PAID UNDER ITEM 141. CLASS A TRENCH EXCAVATION.
2. ALL PROPOSED (NEW) CATCH BASINS SHALL HAVE 4' SUMPS.
3. ALL CATCH BASINS WITHIN THE PAVED ROADWAY SHALL HAVE CASCADE STYLE/BICYCLE SAFE GRATES UNLESS OTHERWISE NOTED ON THE PLANS.
4. ALL ELEVATIONS, STATIONS, AND OFFSETS FOR ALL CATCH BASINS AND DRAINAGE MANHOLES COME FROM CENTER OF COVER OR GRATE.
5. CONTRACTOR SHALL USE APPROPRIATELY SIZED RCP TO MATCH INTO EXISTING PIPES AS SHOWN.

ELECTRICAL NOTES:

1. CONTRACTOR SHALL COORDINATE WITH LITTLETON LIGHT AND ELECTRIC DEPT. (LELD) ON THE TIMING OF TRANSFER FOR PRIMARY RISER AT UTILITY POLES #78, 99, 104, AND 105. DISRUPTION TO COMMERCIAL PROPERTIES SHALL BE MINIMIZED BY WEEKEND WORK OR THE USE OF GENERATORS.

TREE TRIMMING NOTES:

1. LIMITS OF SELECTIVE CLEARING AND THINNING SHALL BE 10FT OFFSET BACK FROM ANY RESET OHW OR AS SHOWN ON CONSTRUCTION PLANS.

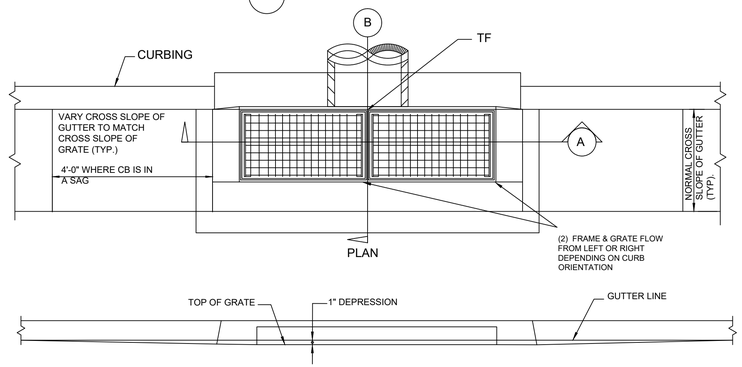
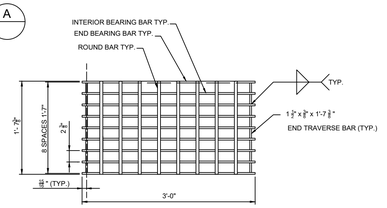
SECTION A

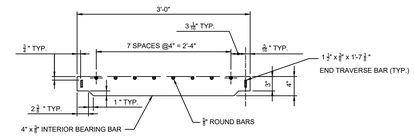


FOR CATCH BASINS IN A LINE OF 6" CONCRETE OR STONE CURBING

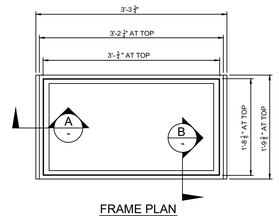
DETAILS OF DEPRESSED GUTTER STRIP



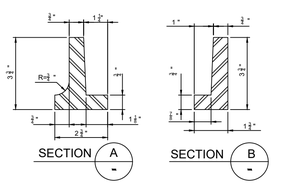
GRATE PLAN VIEW



GRATE ELEVATION-INTERIOR BEARING BAR



FRAME PLAN



SECTION A — SECTION B

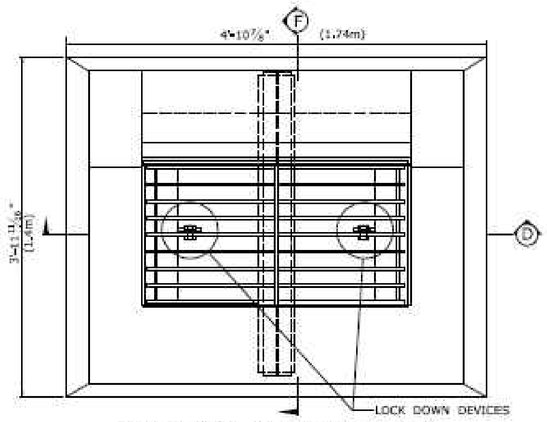
CAST IRON FRAME

CATCH BASIN NOTES:
1. INVERTS AND PIPE DIAMETERS PER UTILITY PLANS
2. DETAILS NOT INDICATED ABOVE ARE TO BE SIMILAR TO THOSE SHOWN ON MASSDOT STANDARD DETAIL 201.3.0
3. FACE OF PIPE FLUSH OR NOT TO PROJECT MORE THAN 4" FROM FACE OF WALL ALONG CENTERLINE OF PIPE
4. FOR DESCRIPTION OF MATERIALS AND CONSTRUCTION METHOD, SEE STANDARD MASSDOT SPECIFICATIONS SECTION 200
5. ALL CONCRETE TO BE AIR ENTRAINED
6. TOP OF FRAME ELEVATION SHALL BE MEASURED IN THE CENTER OF THE GRATE AT GUTTER LINE

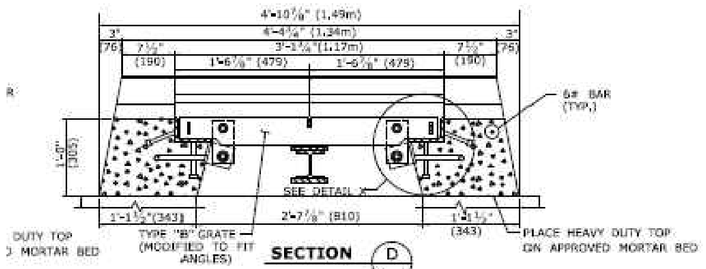
FRAME AND GRATE NOTES:
1. DIMENSIONAL TOLERANCE SHALL BE + 1/16"
2. ALL STEEL BARS SHALL BE WELDED AT ALL INTERSECTIONS
3. ALL WELDING SHALL CONFORM TO THE REQUIREMENTS OF AWS STRUCTURAL WELDING CODE, D1.1
4. STEEL AND CAST IRON MATERIALS SHALL CONFORM TO STANDARD SPECIFICATIONS SECTION 200

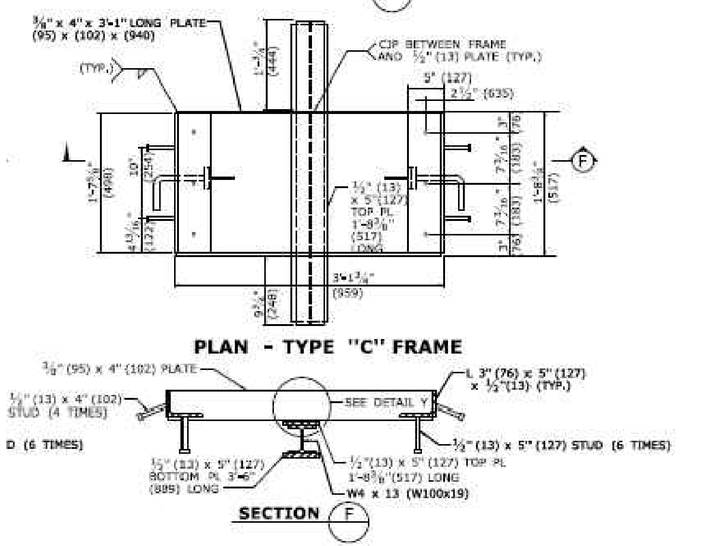
1 DOUBLE CATCH BASIN WITH CURB INLET

SCALE: N.T.S.

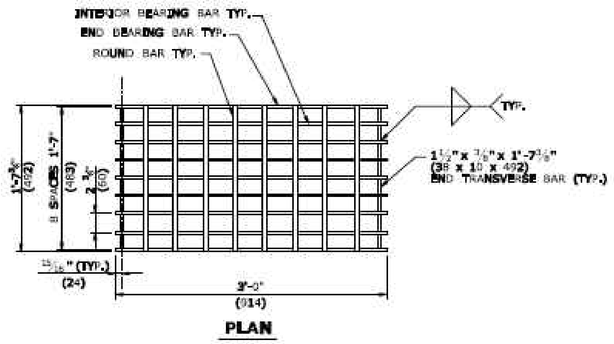


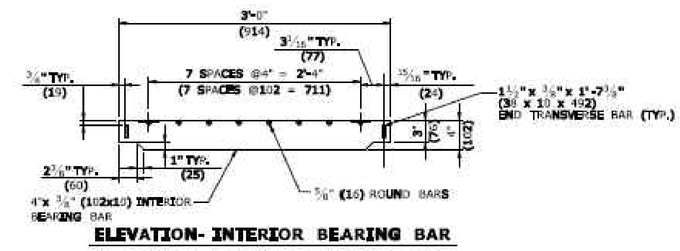
PLAN-TYPE "C" HEAVY DUTY CATCH BASIN TOP

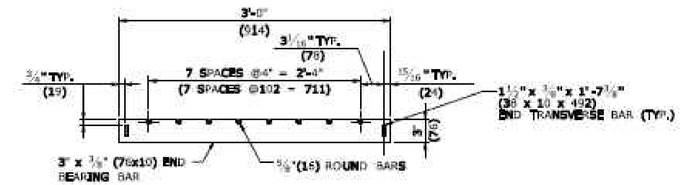




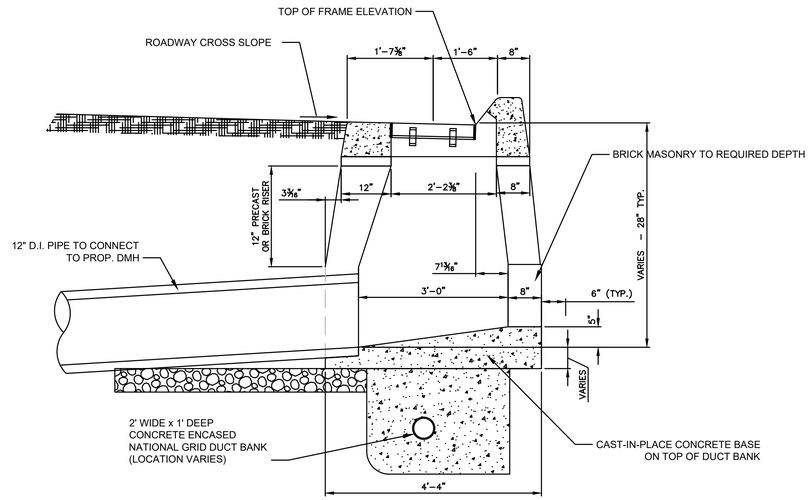
2 DOUBLE CATCH BASIN FRAME
SCALE: N.T.S.







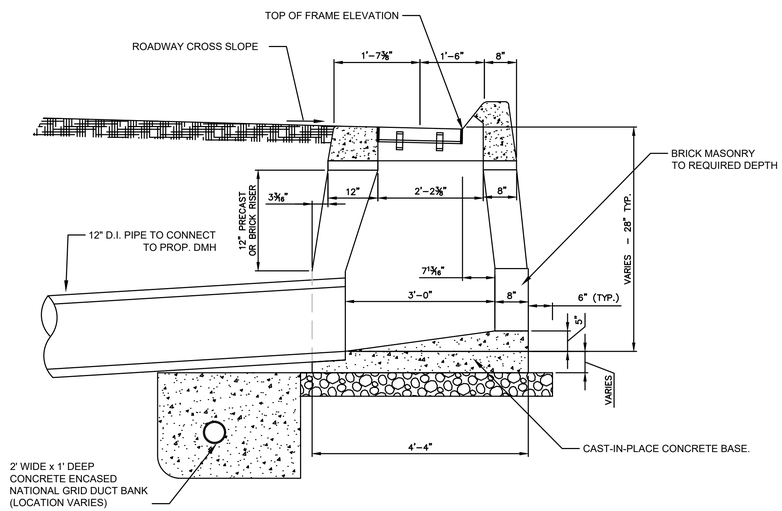
3 DOUBLE CATCH BASIN GRATE
SCALE: N.T.S.



GUTTER INLET - SPECIAL TYPE 1 GENERAL NOTES

1. IF CONCRETE MASONRY UNITS ARE REQUIRED, THE BASIN SHALL BE CONSTRUCTED IN CONFORMANCE WITH THE OVER ALL DIMENSIONS SHOWN HERE. CORBELLING WILL BE ALLOWED AT A MAXIMUM OF 1" PER BLOCK, TURN TOP COURSE 90° TO FRONT AND SIDE WALLS ONLY. RED BRICK IS NOT TO BE USED.
2. END OF PIPE SHALL EXTEND TO AND BE CUT FLUSH WITH INSIDE FACE OF FACE OF GUTTER INLET WALL.
3. MINIMUM CONCRETE COMPRESSIVE STRENGTH OF F'c = 4000 PSI SHALL BE OBTAINED PRIOR TO SHIPPING.
4. ALL KNOCKOUTS IN PRECAST UNITS SHALL BE MADE FLUSH WITH EXTERIOR / INTERIOR OF UNITS USING CONCRETE, BRICKS AND MORTAR.
5. LATEST MASSDOT STANDARD SPECIFICATIONS AND SUPPLEMENTALS SHALL GOVERN.

4 GUTTER INLET – SPECIAL TYPE 1
SCALE: N.T.S.



5 GUTTER INLET – SPECIAL TYPE 2

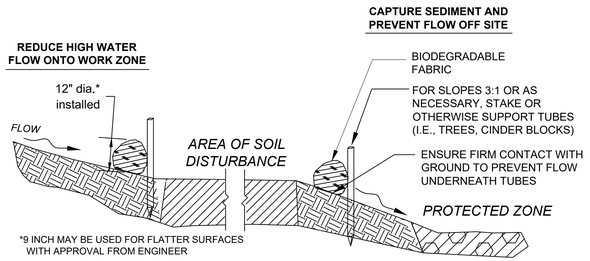
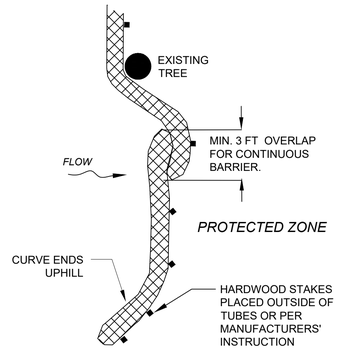
CONSTRUCTION DETAILS

20170044A21_DET01.DWG 19-Apr-2023



SECTION



PLACE TUBE ALONG CONTOURS AND PERPENDICULAR TO FLOW.

PLACE AS CLOSE TO LIMIT OF SOIL DISTURBANCE AS POSSIBLE

ADJUST LOCATION AS REQUIRED FOR OPTIMUM EFFECTIVENESS. DO NOT INSTALL IN WATERWAYS.

PLACE STAKES AS NEEDED TO SECURE TUBES IN PLACE.

PLAN VIEW

SEDIMENT BARRIER - COMPOST FILTER TUBES

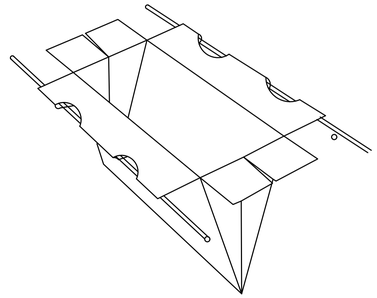
NOT TO SCALE

COMPOST FILTER TUBE

NOT TO SCALE

6 SEDIMENT BARRIERS – COMPOST FILTER TUBES

SCALE: N.T.S.

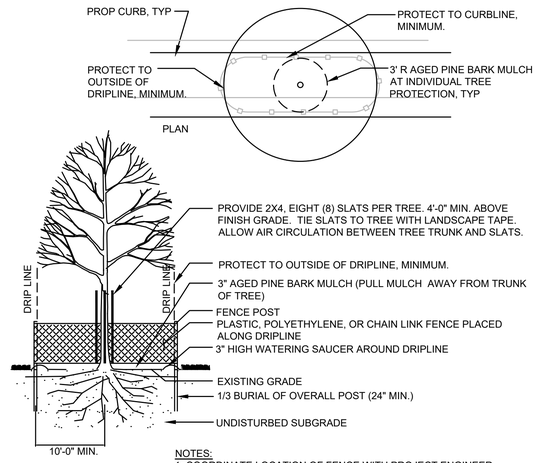


NOTES:

1. SIZED TO FIT ANY SIZE OR SHAPE CATCH BASIN.
2. ALL SEAMS DOUBLE STITCHED.
3. PERMEABILITY - REGULAR FLOW SILTSACK - 40 gal./min./sq. ft.
   HI - FLOW SILTSACK - 200 gal./min./sq. ft.

7 CATCH BASIN SILT SACK

SCALE: N.T.S.

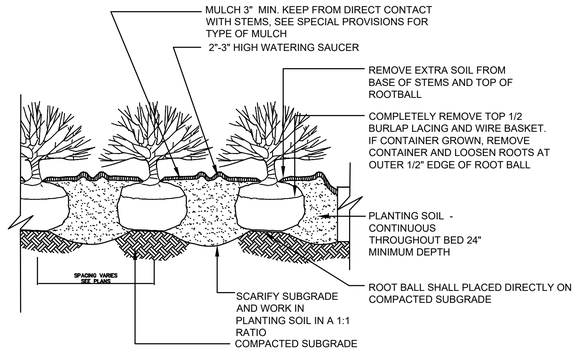


NOTES:
1. COORDINATE LOCATION OF FENCE WITH PROJECT ENGINEER.
2. IF EXCAVATION OCCURS WITHIN DRIPLINE, EXISTING ROOTS SHALL BE CLEANLY CUT PRIOR TO EXCAVATION BY A CERTIFIED ARBORIST AND TREES SHALL BE WATERED.

8 INDIVIDUAL TREE PROTECTION

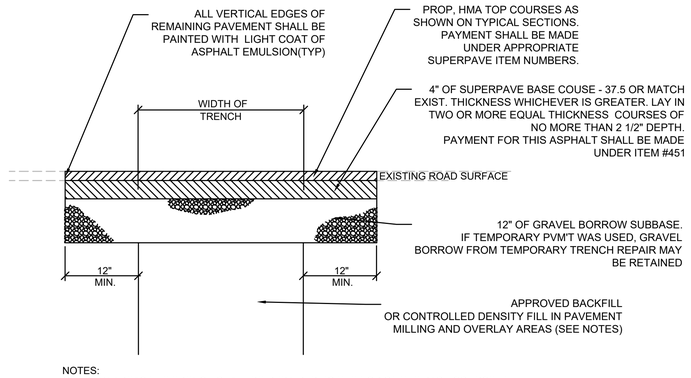
SCALE: N.T.S.

NOTES:
1. TOPSOIL SHALL HAVE A PH RANGE OF 5.5 TO 7 WITH A MINIMUM 2 PERCENT ORGANIC MATERIAL CONTENT. AMEND WITH SOIL AMENDMENTS AS NECESSARY.
2. NO PRUNING OR CUTTING UNLESS DIRECTED BY THE ENGINEER.
3. SAUCER SHALL BE FLOODED TWICE DURING THE FIRST 24 HOURS AFTER PLANTING.
4. PLANTS SHALL BE SET PLUMB AND PLANTED SO THAT THE TOP OF THE ROOTBALL IS 1"-2" ABOVE FINSHED GRADE.
5. COORDINATE PLANTING WITH RESIDENT ENGINEER PRIOR TO INSTALLATION.



9 SHRUB AND PERENNIAL PLANTING

SCALE: N.T.S.



NOTES:
OVERLAY AREAS:THE TRENCH SHALL BE REPAIRED TO THE TOP OF THE BASE COURSE. THE TOP COURSES SHALL BE PLACED WITH OVERLAY OF THE ROADWAY

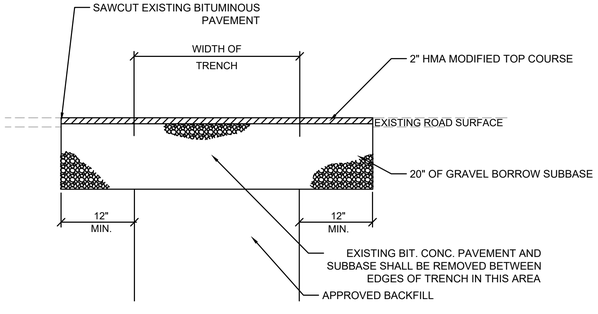
ROADWAY TRENCHING OUTSIDE OF FULL DEPTH AND OVERLAY: THE TRENCH SHALL BE REPAIRED WITH TOP COURSES INSTALLED WITH THE BASE COURSE.

CONTROLLED DENSITY FILL MAY BE USED IN LIEU OF APPROVED BACKFILL IN PAVEMENT MILLING AND OVERLAY AREAS WHERE NORMAL BACKFILL CANNOT PLACED OR TO REDUCE AMOUNT OF TIME NEED TO BACKFILL THE TRENCH. USE OF CONTROLLED DENSITY FILL TO BACKFILL TRENCHES SHALL BE APPROVED BY ENGINEER.

PERMANENT ASHPALT SHALL BE PAID FOR UNDER ITEM #451.

10 PERMANENT PAVEMENT TRENCH REPAIR IN ROADWAYS

SCALE: N.T.S.



NOTES:
THE TEMPORARY PAVEMENT TRENCH REPAIR SHALL BE USED DURING THE TIME BETWEEN COMPLETION OF THE UTILITY CONSTRUCTION AND CONSTRUCTION OF THE PROPOSED ROADWAY PAVEMENT STRUCTURE OR PERMANENT PAVEMENT TRENCH REPAIR.

TEMPORARY ASHPALT SHALL BE PAID FOR UNDER ITEM #472

11 TEMPORARY PAVEMENT TRENCH REPAIR

SCALE: N.T.S.

Appendix C

Notice To Abutters

NOTIFICATION TO ABUTTERS

Modified for Covid-19 Emergency Response

Notice of Intent or abbreviated Notice of Resource Area Delineation

Under MA Wetlands Protection Act and Littleton Wetlands Protection ByLaw (Chapter 171), this form must be completed and mailed, certified mail return receipt requested, to all abutters at their mailing addresses shown on the most recent Town Assessor's records as well as the owner (if not applicant).

In accordance with the MA Wetlands Protection Act and Littleton Wetlands Protection ByLaw Chapter 171-2D, you are hearby notified of a public hearing on the matter described below:

A. The applicant has filed a Notice of Intent with the Littleton Conservation Commission for work in an area subject to protection under the Massachusetts Wetlands Protection Act and Littleton Wetlands Protection ByLaw.

B. The name of the applicant is Stephen Jahnle

C. The address of the land where the activity is proposed is Foster Street from Taylor St to Balsam Ln

D. The work proposed is
Road reconstruction, shared-use path construction, water main replacement, catch basin replacement on Foster Street from Taylor Street to Balsam Lane, Intersection of Taylor Street and Foster Street, and Intersection of Grimes Lane and Foster Street

E. Due to the Commonwealth and Town of Littleton's Covid-19 Emergency Response, it is anticipated that paper copies of the Notice of Intent will not be available for inspection. Copies of the Notice of Intent may be examined at the Conservation Commission webpage at https://www.littletonma.org/conservation, under "Conservation Calendar" at least 48 hours before the meeting. If you click on the day of the meeting in the Calendar, you will be lead to a link showing posted project information. If you have questions you can contact the Littleton Conservation Commission (contact information at the end of this notice).

F. Due to the Commonwealth and Town of Littleton's Covid-19 Emergency Response, it is anticipated that paper copies of the Notice of Intent will not be available for distribution. Copies of the Notice of Intent may be obtained electronically from (check one) the ☐ applicant or ☑ the applicant's representative by calling 413-452-0445 during the following times: Fuss & O'Neill, Inc.

G. The public hearing will be held on TBD. Information regarding the date and time of the public hearing may be obtained from the Littleton Conservation Commission (see contact info at the end of this notice).

H. Notice of the public hearing, including date, will be published at least five business days in advance in a paper of local circulation. The agenda, noting times will be posted at Town Hall and at https://www.littletonma.org/conservation under "Conservation Calendar" at least 48 hours in advance of the meeting. It is currently anticipated that this meeting will be held entirely remotely, pursuant to Governor Baker's March 12, 2020 Order Suspending Certain Provisions of the Open Meeting Law and Governor Baker's March 15, 2020 Order imposing strict limitations on the number of people that may gather in one place. If the meeting is held remotely, instructions for remote viewing of, and participation in, the meeting will be included in the agenda and may also be obtained from the Littleton Conservation Commission.

You may contact the Littleton Conservation Commission Coordinator (Amy Green; agreen@littletonma.org; 978-540-2428), or the Massachusetts Department of Environmental Protection/ Central Region (508-792-7650) at 8 New Bond Street, Worcester, MA 01606) for information about this application

Re: Certified List of Abutters Conservation Commission

Applicant: Aaron Keegan
Name of Firm: Fuss & O'Neill, Inc.
Mailing Address 1550 Main Street Suite 400

Subject Parcel Location: Roadway; Foster Street 238-305 & Taylor Street 221-241
Subject Parcel No.: Roadway
Subject Owner Name: Town of Littleton

M.G.L. Chapter 131: Section 40 ..... "Any person filing a notice of intention with a conservation commission shall at the same time give written notification thereof, by delivery in hand or certified mail, return receipt requested, to all abutters within one hundred feet of the property line of the land where the activity is proposed, but not limited to, owners of land directly opposite said proposed activity on any public or private street or way, and in another municipality or across a body of water. When a notice of intent proposes activities on land under water bodies and waterways or on a tract of land greater than 50 acres, written notification shall be given to all abutters within 100 feet of the proposed project site. For the purposes of this action, "project site" shall mean lands where the following activities are proposed to take place: dredging, excavating, filling, grading, the erection, reconstruction or expansion of a building or structure, the driving of pilings, the construction or improvement of roads or other ways and the installation of drainage, sewerage and water systems, and "land under water bodies and waterways" shall mean the bottom of, or land under, the surface of the ocean or an estuary, creek, river stream, pond or lake. When a notice of intent proposes activity on a linear shaped project site longer than 1,000 feet in length, notification shall be given to all abutters within 1,000 feet of the proposed project site. If the linear project site takes place wholly within an easement through another person's land, notice shall also be given to the landowner. Said notification shall be at the applicant's expense, and shall state where copies of the notice of intention may be examined and obtained and where information regarding the date, time and place of the public hearing may be obtained. Proof of such notification, with a copy of the notice mailed or delivered, shall be filed with the conservation commission."…….

I hereby certify the attached list of abutter (s) as stated in the M.G.L. Chapter 131, Section 40.

Number of Abutter (s) ***161***

Wetland Delineation Report

Massachusetts Inland Resource Area Delineation Report

Report Date: September 11, 2018

Prepared For: Mr. Chris Stoddard, P.E., Director of Public Works, Highway Department
P.O. Box 1305
39 Ayer Road (Rte. 2A)
Littleton, MA 01460

Site Address/Location: Foster Street, Littleton, MA
42.518314°N, 71.503733°W

Inspection Date(s): July 19, 2018

Regulated Inland Wetland Resource Areas:

- ☒ Bank
- ☒ Land Under Water Bodies and Waterways
- ☐ Riverfront Area
- ☒ Buffer Zone
- ☐ Vernal Pool (Certified and/or Potential)
- ☒ Bordering Vegetated Wetland (BVW)
- ☐ Land Subject to Flooding (BLSF/ILSF)
- ☐ Isolated Vegetated Wetland
- ☐ Estimated Habitats of Rare Wildlife
- ☐ Priority Habitats of Rare Species

Delineated Resource Area Field Numbering Sequence [as depicted on the attached Resource Map]:

Bank/LUWW: A100-116, F600-602 (R&L)
BVW: B200-205, C300-309, D400-405, E500-503

Inland resource areas were delineated in accordance with applicable local, state and federal statutes, as detailed within the Resource Area Description attachment. This delineation does not constitute an official wetland boundary until such time as it is accepted and approved by local, state or federal regulatory agencies.

FUSS & O'NEILL

Massachusetts Inland Resource Area Delineation Report
Resource Area Description

Introduction

Fuss & O'Neill Inc. performed a wetland resource area field inspection and delineation at Foster Street ("Site") located off Taylor Street in Littleton, Massachusetts. The field inspection and delineation occurred on July 19, 2018. The purpose of the delineation was to locate the jurisdictional limits of areas regulated under the Wetlands Protection Act (M.G.L. c. 131 sec. 40) and associated Wetlands Protection Act Regulations (310 CMR 10).

Bank and Vegetated Bordering Wetlands (BVW) inland wetland resource areas were identified and delineated during the field investigation. Consecutively numbered flags were placed in the field to demarcate these resource area boundaries. Regulated Buffer Zone on the Property is measured horizontally from the boundaries of BVWs and intermittent watercourse Banks.

Maps retrieved from MassGIS were used to determine if specific regulated inland wetland resources have been mapped and/or documented on the Property. MassGIS maps do not depict Massachusetts Natural Heritage and Endangered Species Program (NHESP) Priority Habitats of Rare Species, Certified Vernal Pools, Potential Vernal Pools or Bordering Land Subject to Flooding (see additional details regarding FEMA Flood Zones below) on the Site. A detailed description of each regulated resource area present on the Site is provided below.

Resource Areas

Bank: Regulatory Framework and Delineation Methodology

Bank is defined under 310 CMR 10.54(2)(c) as "the portion of the land surface which normally abuts and confines a water body. It occurs between a water body and a vegetated bordering wetland and adjacent flood plain, or, in the absence of these, it occurs between a water body and an upland." Fuss & O'Neill Inc. performed a delineation of Bank within the area of interest using consecutively numbered flags placed in the field to demarcate the Bank of an intermittent stream, as well as the Bank of a small unnamed pond and its associated downstream channel.

Bank: Resource Description

Bank was located in the field by the first observable break in topography between water bodies and the adjacent BVW or upland. Water bodies on the property include the small unnamed pond and the associated downstream intermittent stream. The delineated Bank along the intermittent watercourses coincided with the Mean Annual High-Water Line (MAHWL)/bankfull, as defined under 310 CMR 10.58 (2)(a)(2). No evidence of riverine characteristics was noted along the pond bank during the inspection (i.e., no discernible direction of flow, no evidence of scour, etc.).

Land under Water Bodies and Waterways (LUWW)

LUWW is defined under 310 CMR 10.56 (2)(a) as "the land beneath any creek, river, stream, pond or lake. Said land may be composed of organic muck or peat, fine sediments, rocks or bedrock." The boundary of LUWW is defined as the mean annual low water level (310 CMR 10.56 (2)(c). LUWW was not specifically field delineated. For the intents and purposes of this resource area delineation, the delineated Banks of the pond and intermittent watercourse are analogous to the limits of LUWW.

Bordering Vegetated Wetlands (BVW): Regulatory Framework and Delineation Methodology

As stated in 310 CMR (2)(a), "Bordering Vegetated Wetlands are freshwater wetlands which border on creeks, rivers, streams, ponds and lakes. The types of freshwater wetlands are wet meadows, marshes, swamps and bogs. Bordering Vegetated Wetlands are areas where the soils are saturated and/or inundated such that they support a predominance of wetland indicator plants. The ground and surface water regime and the vegetation community which occur in each type of freshwater wetland are specified in M.G.L. c 131 sec. 40."

Fuss & O'Neill Inc. inspected the Site for bordering vegetated wetlands in accordance with methodology provided in the Massachusetts DEP handbook, Delineating Bordering Vegetated Wetlands under the Massachusetts Wetlands Protection Act, (March 1995), the 1987 Corps of Engineers Wetlands Delineation Manual, and the Regional Supplement to the Corps of Engineers Wetlands Delineation Manual: Northcentral and Northeast Region (Version 2.0. January 2012). Data regarding vegetation, soils, and hydrology was gathered to complete the required MassDEP BVW delineation field forms. Wetlands are categorized in accordance with Classification of Wetlands and Deepwater Habitats of the United States (Cowardin et.al. 1979).

Hydric soil determinations were made in accordance with Field Indicators for Identifying Hydric Soils in New England (NEIWPCC, 2018). The Wetland Indicator Status for plant species was ascertained using the USACE Northcentral and Northeast 2014 Regional Wetland Plant List (Lichvar et al., 2014).

BVW: Resource Area Description

Vegetation

Six (6) BVWs were identified on the Site. Four of the six BVWs on the Site are classified as palustrine forested wetlands. Common vegetation identified within forested BVWs includes [common name/scientific name (indicator status)]: Red Maple/Acer rubrum (FAC), highbush blueberry/Vaccinium corymbosum (FACW), bittersweet/Celastrus orbiculatus (UPL), poison ivy/Toxicodendron radicans (FAC), silky dogwood/Swida amomum (FACW), gray dogwood/Swida racemosa (FAC), glossy false buckthorn/Frangula alnus (FAC), arrowwood/Viburnum dentatum (FACW), elderberry/Sambucus nigra (FACW),

spicebush/Lindera benzoin (FACW), sweet pepperbush/Clethra alnifolia (FAC), multiflora rose/Rosa multiflora (FACU), cinnamon fern/Osmundastrum cinnamomeum (FACW), sensitive fern/onoclea sensibilis (FACW), Jack-in-the-pulpit/Arisaema triphyllum (FAC), skunk-cabbage/Symplocarpus foetidus (OBL), false hellebore/Veratrum viride (FACW), and jewelweed/Impatiens capensis (FACW).

The remaining two BVWs are classified as palustrine emergent wet meadows. Common vegetation identified within emergent wet meadow BVWs includes [common name/scientific name (indicator status)]: arrowwood, silky dogwood, poison ivy, sensitive fern, cinnamon fern, jewelweed, royal fern/Osmunda regalis (OBL), soft rush/Juncus effusus(OBL), tall meadow rue/Thalictrum pubescens (FACW), and blue flag iris/Iris versicolor (OBL).

Hydrology

The BVWs identified on the southern portion of the site are hydrologically connected to the on-site pond and another small pond adjacent to the Site. The intermittent stream associated with the on-site pond flows north from the pond and is conveyed through a culvert beneath Foster Street. The stream leads to a wetland system north of Foster Street. Two BVWs on the central portion of the site are hydrologically connected to an intermittent stream that runs parallel to Route 2. The remaining two BVWs are hydrologically connected to one another via a culvert and are supported by an intermittent stream that enters the site from the east. Evidence of surface water and soil saturation include: direct observation of surface water, water stained leaves and tree trunks, sediment deposition, free water in test holes, saturated soils, and hydric soils.

Soils

The Natural Resource Conservation Service (NRCS) mapped soil types on the Property include: Canton, Paxton, Urban Land, Udorthents, Swansea muck, Charlton, and Hollis series. Detailed information regarding each of these soil series is included within the NRCS Soil Map and Soil Report attachment. Results of the detailed field analyses of soils on the Property were generally consistent with the published NRCS soil mapping.

Buffer Zone

Buffer Zone is defined in 310 CMR 10.04 as "that area of land extending 100 feet horizontally outward from the boundary of any area specified in 310 CMR 10.02(1)(a)." Buffer Zone within the area of interest is associated with BVW and Bank. The buffer zone on the Property contains upland forested areas, residential and commercial properties, and various municipal roads. Common vegetation within the Buffer Zone includes: beech/Fagus grandifolia (FACU), red maple, red oak/Quercus rubra (FACU), eastern white pine/Pinus strobus (FACU), gray birch/Betula populifolia (FAC), Virginia creeper/Parthenocissus quinquefolia (FACU), poison ivy, grape/Vitis labrusca (FACU), bittersweet, multiflora rose, sassafras/Sassafras albidum (FACU),

staghorn sumac/Rhus hirta (UPL), brambles/Rubus spp., greenbriar/Smilax rotundifolia (FAC), tatarian honeysuckle/Lonicera tatarica (FACU), whorled bedstraw/Galium mollugo (UPL), sensitive fern, and Canada mayflower/Maianthemum canadense (FACU).

FEMA Flood Zones

The MassGIS National Flood Hazard Layer provided by the Federal Emergency Management Agency (FEMA) does not depict areas of potential flooding on the Property. Bordering Land Subject to Flooding (BLSF) is not mapped for the Site: BLSF is defined in 310 CMR 10.57 (2)(a)(1) as "an area with low, flat topography adjacent to and inundated by flood waters rising from creeks, rivers, streams, ponds or lakes. It extends from the banks of these waterways and water bodies; where a bordering vegetated wetland occurs, it extends from said wetlands."

DEP Bordering Vegetated Wetland (310 CMR 10.55) Delineation Field Forms

MassDEP Bordering Vegetated Wetland (310 CMR 10.55) Delineation Field Data Form

Applicant: Town of Littleton Prepared by: Robin Casioppo, Fuss & O'Neill, Inc. Project location: Littleton, MA DEP File #:_____
Check all that apply:

- ❑ Vegetation alone presumed adequate to delineate BVW boundary: fill out Section I only
- ❑ Vegetation and other indicators of hydrology usedto delineateBVW boundary: fill out Sections I and II
- ❑ Method other than dominance test used (attach additional information)

Section I.

Vegetation	Observation Plot Number:B1W1		Transect Number:1	Date of Delineation:7/19/18
A. Sample Layer & Plant Species (by common/scientific name)	B. Percent Cover (or basal Area)	C. Percent Dominance	D. Dominant Plant (yes or no)	E. Wetland Indicator Category*
Woody Vines				
Virginia Creeper/ Parthenocissus quinquefolia	2	100	yes	FACU
Shrubs				
Gray dogwood/Swida racemosa*	80	100	yes	FAC
Herbs				
Sensitive fern/Onoclea sensibilis*	10	100	yes	FACW

* *Use an asterisk to mark wetland indicator plants: plant species listed in the Wetlands Protection Act (MGL c.131, s.40); plants in the genus Sphagnum; plants listed as FAC, FAC+, FACW-, FACW, FACW+, or OBL; or plants with physiological or morphological adaptations. If any plants are identified as wetland indicator plants due to physiological or morphological adaptations, describe the adaptation next to the asterisk.*

Vegetation conclusion:

Number of dominant wetland indicator plants: 2 Number of dominant non-wetland indicator plants: 1

Is the number of dominant wetland plants equal to or greater than the number of dominant non-wetland plants? **yes** no

If vegetation alone is presumed adequate to delineate the BVW boundary, submit this form with the Request for Determination of Applicability or Notice of Intent

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:25,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Middlesex County, Massachusetts
Survey Area Data: Version 17, Oct 6, 2017

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 12, 2014—Sep 28, 2014

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Littleton Waiver Request Form

Littleton Conservation Commission

37 Shattuck Street / Room 303

Phone: 978 540-2428
Fax: 978 952-2321

Littleton Wetland Protection Regulations

Waiver Request Requirement Information (Section 1.4)

Date: 5/19/2023 Applicant/Owner: Town of Littleton DPW

Map/Lot: 1425 Project Address: Roadway; 238-305 Foster St & 221-241 Taylor St

In order request a waiver, the following provides a guidance for required information (attach additional text, plans, photos or graphics if needed):

Project purpose and need: The Project will reconstruct Foster Street between Taylor Street and Balsam Lane. A new 10 ft separated shared-use path will be furnished throughout the project while the road surface on Foster St will be narrowed slightly. The project addresses vehicular, pedestrian, and bicycle safety. The project proposes an improved storm water drainage system to the maximum extent practical. . The project will also include the replacement of a 10" water main underneath Foster Street in an effort to 'dig once' and reduce disturbance to the corridor.

What specific action(s) is the Waiver being asked for?

A Waiver from the provisions in Section 4.2, 50-ft No Disturb Zone, of the Town Bylaw Regulation for a limited project qualifying under 310 CMR 10.53 (3)(f), "Maintenance and improvement of existing public roadways, but limited to widening less than a single lane, adding shoulders, correcting substandard intersections, and improving inadequate drainage systems."

How is the action(s) in the public interest, necessary to avoid a taking, necessary to prevent a safety hazard or water dependent?

The project will include construction a new shared-use path for non-motorized travel connecting to a commuter rail station on Foster St. The drinking water main underneath Foster St will be replaced during reconstruction of the road.

How is the action(s) consistent with the intent and purpose of the Bylaw?

The shared-use path for bicycles and pedestrians is a mitigating factor because it will expand the Town's non-motorized travel network to a public transit station. This will contribute to lowering vehicle exhaust emissions, a much needed step toward reducing climate change.

Existing and proposed site conditions (ie, impervious, lawn & disturbed areas) (square feet; show on plan):

Project area is 5.4 acres along a linear road corridor. Total length of road is 0.81 miles. Existing impervious is 2.93 acres in the project area from road surface, driveways, and some sidewalks.

Existing and proposed distances of land uses from wetland resource areas (show on plan):

Foster St will be shifted up to 4ft in some locations to the south side. A new 10ft wide shared-use path will be constructed on the west side of the road. The total paved cross section of the road and path will change from 28ft wide in the existing condition to 34ft wide in the proposed condition. The environmental impact plans show proposed permanent and temporary impacts to 50-ft No Disturb Zone and 100-ft Buffer Zone. There are no other proposed direct impacts to any other wetland resource area.

Analysis of less environmentally damaging practicable alternative:

An alternative that reconstructs Foster St as the same design as existing condition would avoid Buffer Zone and 50-FT No Disturb impacts. However, there would be no accommodation of safe and separated walking or biking in the corridor thus continuing an unsafe condition that encourages driving over non-motorized travel for short local trips.

Proposed short term and long term protection of wetland resource areas:

As shown in plans, erosion controls including sediment barriers and catch basin silt sacks will be installed during the full length of the project construction for short term protection of wetland resources. Long-term protection will be provided by an upgraded storm drainage system including new deep-sump catch basins, leaching catch basins, and cleaned/repaired existing catch basins.

Is the site in a Zone I, II or III (groundwater) or Zone A, B or C (surface water) water supply area: The project limits are not within any of the above water supply areas.

Are there critical, unique or sensitive resource areas in the area (ie, NHESP mapped habitat, vernal pools, unusual wetland types, cold water fisheries, outstanding resource waters, Core Habitat, Conservation land, etc); show on plan:

There are no critical resource areas in the project limits nor nearby adjacent.

Other factors for consideration:

The final preferred alternative for the project chose a road design that had 1ft less width of pavement compared to a competing alternative which called for bike lanes and sidewalks on both sides of the road instead of the shared-use path in the preferred alternative.

Operation and Maintenance Plans

FUSS & O'NEILL

M E M O R A N D U M

TO: Town of Littleton, MA

FROM: Fuss & O'Neill, Inc.

DATE: April 18, 2023

RE: Construction Operation and Maintenance Plan
Foster Street Reconstruction
Littleton, MA

Responsible Party: Town of Littleton
Department of Public Works
39 Ayer Rd
Littleton, MA 01460

Property Owner shall be responsible for the operation and maintenance of the site during reconstruction Foster Street. Reconstruction of Foster Street includes full depth pavement replacement, replacement of existing stormwater drainage system, installation of a stormwater treatment structure, addition of a multi-use path and replacement of sidewalks. A suggested operation and maintenance activities and proposed schedule for during construction is as follows:

1. No earthwork activities shall commence until silt fence has been installed. Silt fence shall be installed as shown on the drawings.

2. Areas left exposed to erosion for more than seven days shall be rough graded and temporarily stabilized. Areas disturbed but inactive for more than thirty days shall be temporarily seeded.

3. Erosion and sedimentation controls shall be maintained initial successful establishment of ground cover.

4. No staging of materials or lay down areas shall be located within the resource areas.

5. Paved areas shall be kept free of sediment, and shall be cleaned periodically as required by construction activities.

6. Catch basins shall be periodically inspected for the accumulation of sediment. Catch basins within the project and downstream of work shall have catch basin protection installed and shall be cleaned at the end of the project.

7. Temporary soil stockpiles shall be located within areas consisting of formerly paved or developed surfaces, and will be moved as necessary to accommodate ongoing work.

8. Sediment stockpiles shall have a side slope of no greater than 2:1. Stockpiles shall be rough graded or maintain a roughened surface to prevent erosion. Stockpiles that are not to be used within 7 days shall be seeded after formation of stockpile as to prevent erosion. Straw bale barrier and silt fence shall be installed around stockpile area approximately 10 feet from toe of slope.

9. The contractor is responsible to inspect and repair erosion and sedimentation control measures as required to prevent damage or sedimentation.

10. Upon completion of construction and establishment of permanent ground cover, remove and dispose of temporary erosion control measures. Clean sediment and debris from temporary measures and from permanent storm drain and sanitary sewer systems.

Inspections shall be completed a minimum of every seven (7) calendar days and within 24 hours of the end of a storm event of 0.25 inches or greater. Attached is an example Inspection and Maintenance Report Form.

TO: Town of Littleton

FROM: Fuss & O'Neill, Inc.

DATE: April 18, 2023

RE: Long Term Operation and Maintenance Plan
Foster Street, Taylor Street, and Grimes Lane Reconstruction

This Long Term Operation and Maintenance Plan (O&M) is developed for the reconstruction of Foster Street. This O&M has been prepared in accordance the Massachusetts Stormwater Handbook and the Town of Littleton Regulations.

Responsible Party: Town of Littleton
Department of Public Works
39 Ayer Rd
Littleton, MA 01460

It will be the responsibility of the Town of Littleton to comply with this Long Term Operation and Maintenance Plan. Responsibility includes financing, maintenance and emergency repairs. Should the property or any portion of the property be transferred to another owner, that new owner will be notified of the presence of this Long Term Operation and Maintenance Plan and be held responsible for the implementation of this plan and financing as it pertains to their property.

Operation and Maintenance Plan

The post construction operation and maintenance plan outlined hereafter provides recommendations for periodic inspection and maintenance activities for the stormwater management system. This Long-Term Operation and Maintenance Plan will ensure that the stormwater management system functions as designed throughout the life of the system.

- The stormwater collection systems will be inspected a minimum of four (4) times per year to maintain proper operation. Sediment and debris shall be removed from structures and pipes. Sedimentation will be removed from each deep sump catch basin a minimum of four (4) times a year or whenever the depth of deposits is greater than or equal to one half the depth from the bottom of the invert of the lowest pipe. Deep sump catch basins shall be cleaned at the end of the foliage and snow removal seasons.

- Paved surfaces will be swept twice annually, April and October, to remove sand and debris following winter months.

- Stormwater structures and pipes will be inspected twice annually, April and November, for accumulation of sediment and debris. Clean as required.

FUSS & O'NEILL

Location and Access of Stormwater Management System

All components of the stormwater management system are located within Wisdom Way, River Street, and Mill Street. The attached Site Plans provide the location and access for the stormwater management system.

Records of Maintenance and Repair Activities

The responsible parties shall keep records of installation, maintenance and repairs of the stormwater management facilities. These records shall be retained for the most recent five years be provided to the Conservation Commission annually and upon request. An example Operation and Maintenance Log Form is attached.

Total TSS Removal Efficiency=	**25%**

Appendix I

Illicit Impact Statement

FUSS & O'NEILL

Illicit Discharge Statement
Foster Street, Taylor Street, and Grimes Lane
Roadway Reconstruction

No illicit discharges are proposed to enter the redeveloped stormwater system located within Foster Street, Taylor Street, and Grimes Lane. Inspection procedures outline in the Long-Term Operation and Maintenance Plan will be strictly followed to contaminations do not enter the stormwater system. Illicit discharge detection and elimination procedures will be implemented routinely by visual inspections to prevent illicit discharges into the stormwater system. Town of Littleton DPW personal are informed of the illicit discharge detection and elimination procedures and that no illicit discharges are allowed to enter the stormwater system.

Appendix J

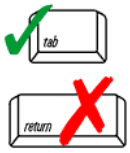
Stormwater Checklist

Massachusetts Department of Environmental Protection
Bureau of Resource Protection - Wetlands Program

Checklist for Stormwater Report

A. Introduction

Important: When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.



A Stormwater Report must be submitted with the Notice of Intent permit application to document compliance with the Stormwater Management Standards. The following checklist is NOT a substitute for the Stormwater Report (which should provide more substantive and detailed information) but is offered here as a tool to help the applicant organize their Stormwater Management documentation for their Report and for the reviewer to assess this information in a consistent format. As noted in the Checklist, the Stormwater Report must contain the engineering computations and supporting information set forth in Volume 3 of the Massachusetts Stormwater Handbook. The Stormwater Report must be prepared and certified by a Registered Professional Engineer (RPE) licensed in the Commonwealth.

The Stormwater Report must include:

- The Stormwater Checklist completed and stamped by a Registered Professional Engineer (see page 2) that certifies that the Stormwater Report contains all required submittals.[1] This Checklist is to be used as the cover for the completed Stormwater Report.
- Applicant/Project Name
- Project Address
- Name of Firm and Registered Professional Engineer that prepared the Report
- Long-Term Pollution Prevention Plan required by Standards 4-6
- Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan required by Standard 8[2]
- Operation and Maintenance Plan required by Standard 9

In addition to all plans and supporting information, the Stormwater Report must include a brief narrative describing stormwater management practices, including environmentally sensitive site design and LID techniques, along with a diagram depicting runoff through the proposed BMP treatment train. Plans are required to show existing and proposed conditions, identify all wetland resource areas, NRCS soil types, critical areas, Land Uses with Higher Potential Pollutant Loads (LUHPPL), and any areas on the site where infiltration rate is greater than 2.4 inches per hour. The Plans shall identify the drainage areas for both existing and proposed conditions at a scale that enables verification of supporting calculations.

As noted in the Checklist, the Stormwater Management Report shall document compliance with each of the Stormwater Management Standards as provided in the Massachusetts Stormwater Handbook. The soils evaluation and calculations shall be done using the methodologies set forth in Volume 3 of the Massachusetts Stormwater Handbook.

To ensure that the Stormwater Report is complete, applicants are required to fill in the Stormwater Report Checklist by checking the box to indicate that the specified information has been included in the Stormwater Report. If any of the information specified in the checklist has not been submitted, the applicant must provide an explanation. The completed Stormwater Report Checklist and Certification must be submitted with the Stormwater Report.

---

[1] The Stormwater Report may also include the Illicit Discharge Compliance Statement required by Standard 10. If not included in the Stormwater Report, the Illicit Discharge Compliance Statement must be submitted prior to the discharge of stormwater runoff to the post-construction best management practices.

[2] For some complex projects, it may not be possible to include the Construction Period Erosion and Sedimentation Control Plan in the Stormwater Report. In that event, the issuing authority has the discretion to issue an Order of Conditions that approves the project and includes a condition requiring the proponent to submit the Construction Period Erosion and Sedimentation Control Plan before commencing any land disturbance activity on the site.

Bureau of Resource Protection - Wetlands Program

Checklist for Stormwater Report

B. Stormwater Checklist and Certification

The following checklist is intended to serve as a guide for applicants as to the elements that ordinarily need to be addressed in a complete Stormwater Report. The checklist is also intended to provide conservation commissions and other reviewing authorities with a summary of the components necessary for a comprehensive Stormwater Report that addresses the ten Stormwater Standards.

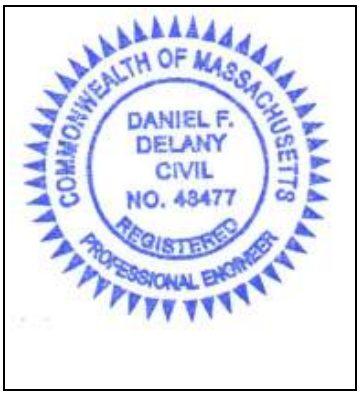
Note: Because stormwater requirements vary from project to project, it is possible that a complete Stormwater Report may not include information on some of the subjects specified in the Checklist. If it is determined that a specific item does not apply to the project under review, please note that the item is not applicable (N.A.) and provide the reasons for that determination.

A complete checklist must include the Certification set forth below signed by the Registered Professional Engineer who prepared the Stormwater Report.

Registered Professional Engineer's Certification

I have reviewed the Stormwater Report, including the soil evaluation, computations, Long-term Pollution Prevention Plan, the Construction Period Erosion and Sedimentation Control Plan (if included), the Long-term Post-Construction Operation and Maintenance Plan, the Illicit Discharge Compliance Statement (if included) and the plans showing the stormwater management system, and have determined that they have been prepared in accordance with the requirements of the Stormwater Management Standards as further elaborated by the Massachusetts Stormwater Handbook. I have also determined that the information presented in the Stormwater Checklist is accurate and that the information presented in the Stormwater Report accurately reflects conditions at the site as of the date of this permit application.

Registered Professional Engineer Block and Signature



9/18/23

Signature and Date

Checklist

Project Type: Is the application for new development, redevelopment, or a mix of new and redevelopment?

☐ New development

☒ Redevelopment

☐ Mix of New Development and Redevelopment

Checklist for Stormwater Report

Checklist (continued)

LID Measures: Stormwater Standards require LID measures to be considered. Document what environmentally sensitive design and LID Techniques were considered during the planning and design of the project:

☒ No disturbance to any Wetland Resource Areas

☐ Site Design Practices (e.g. clustered development, reduced frontage setbacks)

☐ Reduced Impervious Area (Redevelopment Only)

☐ Minimizing disturbance to existing trees and shrubs

☐ LID Site Design Credit Requested:

- ☐ Credit 1
- ☐ Credit 2
- ☐ Credit 3

☐ Use of "country drainage" versus curb and gutter conveyance and pipe

☐ Bioretention Cells (includes Rain Gardens)

☐ Constructed Stormwater Wetlands (includes Gravel Wetlands designs)

☐ Treebox Filter

☐ Water Quality Swale

☐ Grass Channel

☐ Green Roof

☐ Other (describe): _____

Standard 1: No New Untreated Discharges

☒ No new untreated discharges

☒ Outlets have been designed so there is no erosion or scour to wetlands and waters of the Commonwealth

☐ Supporting calculations specified in Volume 3 of the Massachusetts Stormwater Handbook included.

Checklist for Stormwater Report

Checklist (continued)

Standard 2: Peak Rate Attenuation

☐ Standard 2 waiver requested because the project is located in land subject to coastal storm flowage and stormwater discharge is to a wetland subject to coastal flooding.

☐ Evaluation provided to determine whether off-site flooding increases during the 100-year 24-hour storm.

☐ Calculations provided to show that post-development peak discharge rates do not exceed pre-development rates for the 2-year and 10-year 24-hour storms. If evaluation shows that off-site flooding increases during the 100-year 24-hour storm, calculations are also provided to show that post-development peak discharge rates do not exceed pre-development rates for the 100-year 24-hour storm.

Standard 3: Recharge

☐ Soil Analysis provided.

☐ Required Recharge Volume calculation provided.

☐ Required Recharge volume reduced through use of the LID site Design Credits.

☐ Sizing the infiltration, BMPs is based on the following method: Check the method used.

☐ Static ☐ Simple Dynamic ☐ Dynamic Field[1]

☐ Runoff from all impervious areas at the site discharging to the infiltration BMP.

☐ Runoff from all impervious areas at the site is *not* discharging to the infiltration BMP and calculations are provided showing that the drainage area contributing runoff to the infiltration BMPs is sufficient to generate the required recharge volume.

☐ Recharge BMPs have been sized to infiltrate the Required Recharge Volume.

☐ Recharge BMPs have been sized to infiltrate the Required Recharge Volume *only* to the maximum extent practicable for the following reason:

- ☐ Site is comprised solely of C and D soils and/or bedrock at the land surface
- ☐ M.G.L. c. 21E sites pursuant to 310 CMR 40.0000
- ☐ Solid Waste Landfill pursuant to 310 CMR 19.000
- ☐ Project is otherwise subject to Stormwater Management Standards only to the maximum extent practicable.

☐ Calculations showing that the infiltration BMPs will drain in 72 hours are provided.

☐ Property includes a M.G.L. c. 21E site or a solid waste landfill and a mounding analysis is included.

---

[1] 80% TSS removal is required prior to discharge to infiltration BMP if Dynamic Field method is used.

Checklist for Stormwater Report

Checklist (continued)

Standard 3: Recharge (continued)

☐ The infiltration BMP is used to attenuate peak flows during storms greater than or equal to the 10-year 24-hour storm and separation to seasonal high groundwater is less than 4 feet and a mounding analysis is provided.

☐ Documentation is provided showing that infiltration BMPs do not adversely impact nearby wetland resource areas.

Standard 4: Water Quality

The Long-Term Pollution Prevention Plan typically includes the following:

- Good housekeeping practices;
- Provisions for storing materials and waste products inside or under cover;
- Vehicle washing controls;
- Requirements for routine inspections and maintenance of stormwater BMPs;
- Spill prevention and response plans;
- Provisions for maintenance of lawns, gardens, and other landscaped areas;
- Requirements for storage and use of fertilizers, herbicides, and pesticides;
- Pet waste management provisions;
- Provisions for operation and management of septic systems;
- Provisions for solid waste management;
- Snow disposal and plowing plans relative to Wetland Resource Areas;
- Winter Road Salt and/or Sand Use and Storage restrictions;
- Street sweeping schedules;
- Provisions for prevention of illicit discharges to the stormwater management system;
- Documentation that Stormwater BMPs are designed to provide for shutdown and containment in the event of a spill or discharges to or near critical areas or from LUHPPL;
- Training for staff or personnel involved with implementing Long-Term Pollution Prevention Plan;
- List of Emergency contacts for implementing Long-Term Pollution Prevention Plan.

☒ A Long-Term Pollution Prevention Plan is attached to Stormwater Report and is included as an attachment to the Wetlands Notice of Intent.

☐ Treatment BMPs subject to the 44% TSS removal pretreatment requirement and the one inch rule for calculating the water quality volume are included, and discharge:

- ☐ is within the Zone II or Interim Wellhead Protection Area
- ☐ is near or to other critical areas
- ☐ is within soils with a rapid infiltration rate (greater than 2.4 inches per hour)
- ☐ involves runoff from land uses with higher potential pollutant loads.

☐ The Required Water Quality Volume is reduced through use of the LID site Design Credits.

☐ Calculations documenting that the treatment train meets the 80% TSS removal requirement and, if applicable, the 44% TSS removal pretreatment requirement, are provided.

Checklist for Stormwater Report

Checklist (continued)

Standard 4: Water Quality (continued)

☐ The BMP is sized (and calculations provided) based on:

- ☐ The ½" or 1" Water Quality Volume or
- ☐ The equivalent flow rate associated with the Water Quality Volume and documentation is provided showing that the BMP treats the required water quality volume.

☐ The applicant proposes to use proprietary BMPs, and documentation supporting use of proprietary BMP and proposed TSS removal rate is provided. This documentation may be in the form of the propriety BMP checklist found in Volume 2, Chapter 4 of the Massachusetts Stormwater Handbook and submitting copies of the TARP Report, STEP Report, and/or other third party studies verifying performance of the proprietary BMPs.

☐ A TMDL exists that indicates a need to reduce pollutants other than TSS and documentation showing that the BMPs selected are consistent with the TMDL is provided.

Standard 5: Land Uses With Higher Potential Pollutant Loads (LUHPPLs)

☐ The NPDES Multi-Sector General Permit covers the land use and the Stormwater Pollution Prevention Plan (SWPPP) has been included with the Stormwater Report.

☐ The NPDES Multi-Sector General Permit covers the land use and the SWPPP will be submitted ***prior to*** the discharge of stormwater to the post-construction stormwater BMPs.

☐ The NPDES Multi-Sector General Permit does ***not*** cover the land use.

☐ LUHPPLs are located at the site and industry specific source control and pollution prevention measures have been proposed to reduce or eliminate the exposure of LUHPPLs to rain, snow, snow melt and runoff, and been included in the long term Pollution Prevention Plan.

☐ All exposure has been eliminated.

☐ All exposure has ***not*** been eliminated and all BMPs selected are on MassDEP LUHPPL list.

☐ The LUHPPL has the potential to generate runoff with moderate to higher concentrations of oil and grease (e.g. all parking lots with >1000 vehicle trips per day) and the treatment train includes an oil grit separator, a filtering bioretention area, a sand filter or equivalent.

Standard 6: Critical Areas

☐ The discharge is near or to a critical area and the treatment train includes only BMPs that MassDEP has approved for stormwater discharges to or near that particular class of critical area.

☐ Critical areas and BMPs are identified in the Stormwater Report.

Checklist for Stormwater Report

Checklist (continued)

Standard 7: Redevelopments and Other Projects Subject to the Standards only to the maximum extent practicable

☒ The project is subject to the Stormwater Management Standards only to the maximum Extent Practicable as a:

- ☒ Limited Project
- ☐ Small Residential Projects: 5-9 single family houses or 5-9 units in a multi-family development provided there is no discharge that may potentially affect a critical area.
- ☐ Small Residential Projects: 2-4 single family houses or 2-4 units in a multi-family development with a discharge to a critical area
- ☐ Marina and/or boatyard provided the hull painting, service and maintenance areas are protected from exposure to rain, snow, snow melt and runoff
- ☒ Bike Path and/or Foot Path
- ☒ Redevelopment Project
- ☐ Redevelopment portion of mix of new and redevelopment.

☒ Certain standards are not fully met (Standard No. 1, 8, 9, and 10 must always be fully met) and an explanation of why these standards are not met is contained in the Stormwater Report.

☐ The project involves redevelopment and a description of all measures that have been taken to improve existing conditions is provided in the Stormwater Report. The redevelopment checklist found in Volume 2 Chapter 3 of the Massachusetts Stormwater Handbook may be used to document that the proposed stormwater management system (a) complies with Standards 2, 3 and the pretreatment and structural BMP requirements of Standards 4-6 to the maximum extent practicable and (b) improves existing conditions.

Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control

A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan must include the following information:

- Narrative;
- Construction Period Operation and Maintenance Plan;
- Names of Persons or Entity Responsible for Plan Compliance;
- Construction Period Pollution Prevention Measures;
- Erosion and Sedimentation Control Plan Drawings;
- Detail drawings and specifications for erosion control BMPs, including sizing calculations;
- Vegetation Planning;
- Site Development Plan;
- Construction Sequencing Plan;
- Sequencing of Erosion and Sedimentation Controls;
- Operation and Maintenance of Erosion and Sedimentation Controls;
- Inspection Schedule;
- Maintenance Schedule;
- Inspection and Maintenance Log Form.

☒ A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan containing the information set forth above has been included in the Stormwater Report.

Checklist for Stormwater Report

Checklist (continued)

Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control (continued)

☐ The project is highly complex and information is included in the Stormwater Report that explains why it is not possible to submit the Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan with the application. A Construction Period Pollution Prevention and Erosion and Sedimentation Control has ***not*** been included in the Stormwater Report but will be submitted ***before*** land disturbance begins.

☐ The project is ***not*** covered by a NPDES Construction General Permit.

☐ The project is covered by a NPDES Construction General Permit and a copy of the SWPPP is in the Stormwater Report.

☒ The project is covered by a NPDES Construction General Permit but no SWPPP been submitted. The SWPPP will be submitted BEFORE land disturbance begins.

Standard 9: Operation and Maintenance Plan

☒ The Post Construction Operation and Maintenance Plan is included in the Stormwater Report and includes the following information:

- ☐ Name of the stormwater management system owners;
- ☒ Party responsible for operation and maintenance;
- ☒ Schedule for implementation of routine and non-routine maintenance tasks;
- ☐ Plan showing the location of all stormwater BMPs maintenance access areas;
- ☐ Description and delineation of public safety features;
- ☐ Estimated operation and maintenance budget; and
- ☒ Operation and Maintenance Log Form.

☐ The responsible party is ***not*** the owner of the parcel where the BMP is located and the Stormwater Report includes the following submissions:

- ☐ A copy of the legal instrument (deed, homeowner's association, utility trust or other legal entity) that establishes the terms of and legal responsibility for the operation and maintenance of the project site stormwater BMPs;
- ☐ A plan and easement deed that allows site access for the legal entity to operate and maintain BMP functions.

Standard 10: Prohibition of Illicit Discharges

☒ The Long-Term Pollution Prevention Plan includes measures to prevent illicit discharges;

☒ An Illicit Discharge Compliance Statement is attached;

☐ NO Illicit Discharge Compliance Statement is attached but will be submitted ***prior to*** the discharge of any stormwater to post-construction BMPs.
